

From Automation to an AI-Native Enterprise

Ericsson Executive Strategy Workshop

September 10th 2026

A NEW ERA . A NEW ADVANTAGE .

THE NEXT ADVANTAGE WON'T COME FROM DOING MORE. IT WILL COME FROM DECIDING DIFFERENTLY.

AI can now act. Operations can now close the loop.
The real shift is how we design, govern & organize to create intelligent outcome at scale.

DECIDE | AUTOMATE | AUTONOMISE | TRUST

Company Confidential © Capgemini 2026. All rights reserved.

WORKSHOP AGENDA

FROM THE SHIFT WE SEE → TO CHOICES ERICSSON CAN MAKE → TO WHAT WE CAN EXECUTE TOGETHER

1	**VISION** Why must Ericsson think differently ?	1.A	The World Is Changing
		1.B	Ericsson Today
		1.C	Define The Future Enterprise
2	**DESIGN THE ENTERPRISE** What must Ericsson redesign?	2.A	Redesign The Enterprise
		2.B	Build The Intelligence Layer
		2.C	Enable The Agentic Workforce
3	**ENABLE AT SCALE** What will make autonomy trusted & scalable ?	3.A	Build Trust At Scale – AI Governance, Control Towers, Responsible AI, & Sovereign AI
		3.B	Operationalize Autonomy

OUTCOME
What should Ericsson do next ?

- **USE CASES** — Where to win
- **PRIORITIES** — Where to focus
- **EXECUTION PATHWAY** — How we get there

WORKSHOP AGENDA

FROM THE SHIFT WE SEE → TO CHOICES ERICSSON CAN MAKE → TO WHAT WE CAN EXECUTE TOGETHER

1	**VISION** Why must Ericsson think differently ?	1.A	The World Is Changing →	Outside-in Perspective
		1.B	Ericsson Today →	Our Understanding
		1.C	Define The Future Enterprise →	Ericsson's vision of 2030
2	**DESIGN THE ENTERPRISE** What must Ericsson redesign?	2.A	Redesign the Enterprise →	Operating Model, decision rights, federation execution & partner accountability
		2.B	Build the Intelligence Layer →	Beyond individual AI Platforms
		2.C	Enable the Agentic Workforce →	Agentic Operations
3	**ENABLE AT SCALE** What will make autonomy trusted & scalable ?	3.A	Build Trust At Scale →	AI Governance, Control Towers, Responsible AI, & Sovereign AI
		3.B	Build the Intelligence Layer →	AI for Cyber Security, Autonomous Infra operations, AI Service Desk Strategy, NaaS

OUTCOME What should Ericsson do next ?

PRIORITIES Where to focus

USE CASES Where to win

EXECUTION PATHWAY How we get there

Company Confidential © Capgemini 2026. All rights reserved.

Three forces are reshaping how leaders like Ericsson are operating

01

The buyer is becoming machine-led

CSP procurement is going agentic. Buyer-side AI will negotiate, score, and procure on behalf of Ericsson's customers.

02

Decision economics are changing

The cost of analysis, drafting, and decision support trends to zero. Headcount and growth decouple. Talent shifts from executor to governor.

03

Governance is moving into execution

Compliance and oversight cannot live in committees anymore. They live in the control plane, in real time, beside every agent.

Company Confidential © Capgemini 2026. All rights reserved.

The world is changing; the boundaries are moving and so are the decisions

As AI, autonomy and programmable infrastructure converge, Ericsson must rethink what to standardize, orchestrate and control across the enterprise

01 AI IS MOVING FROM ASSISTANCE → EXECUTION

AI agents are moving beyond experimentation toward semi-autonomous execution, but enterprise-scale adoption remains early. Also data & technology readiness remain key barriers[1]

What is Changing: Copilot → Agent → Digital worker

Implication: AI is moving into execution, while making data, process and workforce readiness critical to scale

02 AUTONOMY IS MOVING FROM PILOT → ECONOMIC LEVER

Autonomous-network initiatives are demonstrating measurable gains in operational efficiency and network OpEx, strengthening the case for scaling autonomy[2]

What is Changing: Automate tasks → Autonomize outcomes

Implication: Autonomy is moving from experimentation to measurable operating value

03 AI SCALE IS EXPOSING THE COST OF FRAGMENTATION

51% of organizations identify scalable data infrastructure as critical to moving AI from pilots to enterprise-wide deployment; **53%** cite governance and ethical frameworks[8]

What is Changing: Technology towers → Integrated platform + data + governance

Implication: Fragmented foundations increase the complexity and effort required to scale AI enterprise-wide.

04 INFRASTRUCTURE IS BECOMING SOFTWARE-DEFINED & POLICY-DRIVEN

IDC identifies Infrastructure as Code and policy-driven automation as foundations for managing network, compute, storage and hybrid-cloud resources at scale[3,4,5]

What is Changing: Static infrastructure → Programmable, composable infrastructure

Implication: Infrastructure is becoming an intelligent execution layer, not just a support layer

05 INFRASTRUCTURE IS SHIFTING FROM SILOS→ INTEGRATED ORCHESTRATION

88.8% of large organizations still run production workloads on-premises, while **46%** of workloads remain on-premises.
Hybrid estates are now the norm. Increasing the need for integrated orchestration[3]

What is Changing: Technology towers → Integrated platforms, automation & visibility

Implication: A need of consistent visibility, policy and orchestration across DCs, private cloud, edge and HCPs environment

06 SOVEREIGNTY IS BECOMING A DESIGN CHOICE

54% of organizations prioritize data control as AI adoption scales, while Gartner sees sovereignty extending beyond data to operational and technical control[4,8]

What is Changing: Compliance after design → Control by design

Implication: Sovereignty increasingly shapes architecture, sourcing and operating-model choices

THE BIGGER PICTURE

For Ericsson, the opportunity is to connect these shifts into one enterprise agenda.
Standardize the foundations, orchestrate the technology estate, scale trusted autonomy, & balance global consistency with local control

Source: 1.Capgemini Research - Rise of agentic AI, 2. Capgemini Research_AN in Telecom, , 3. IDC- 2026 Vendor Assessment,4 Gartner *, 5. Business Research Company, 6. STL Partners, 7Gartner1 , 8 Capgemini Research - Building the enterprise of tomorrow*

Company Confidential © Capgemini 2026. All rights reserved.

Ericsson has already laid the foundation, but the next leap is from automating activities to autonomizing outcomes

Armor established the foundation; Voyager extended it into orchestration and self-healing. The next value pool lies in reducing the human effort still required to understand, decide, coordinate and verify across domains

1 | Our Understanding - Ericsson's Automation Journey

ARMOR[1]
Automate the repeatable

- Infrastructure-as-Code
- Auto-patching
- Right-sizing
- Event correlation

VOYAGER[1]
Orchestrate the workflow

- Self-service
- Catalogue-driven provisioning
- Workflow orchestration

TODAY[1]
Scale automation

30–35%
YoY incident reduction[1]

~40–45%
Auto-healing maturity[1]

2030 AMBITION[1]
Autonomise the outcome

Intent ▶ Context ▶ Decision ▶ Action ▶ Verification

2 | Where The Next Stage Of Autonomy May Still Face Friction*

	Automation Sustainability	Cross-domain Hand-offs	Decision & Exception Handling	Enterprise Control & Visibility
Industry Observation	Deterministic automation requires engineering effort to maintain, adapt and troubleshoot	End to end workflows increasingly span infra. , cloud, applications, security and workplace domains	Complex cost, security, resilience and performance trade-offs may continue to require human judgement	Distributed automation increases the need for common visibility, guardrails, accountability & control
Areas to validate	How much engineering capacity remains tied to maintaining existing automation?	Where do technology and organizational boundaries still require manual coordination?	Which decisions can be codified, augmented or autonomized, and where must human accountability remain?	What enterprise controls are required to scale autonomy while preserving local flexibility & sovereignty?

**These are hypotheses for discussion and validation, not assertions about Ericsson's current operational baseline*

3 | Inside-out Signals To Validate

~ $400M**
significant infrastructure cost base to optimize

~ 90,000**
High ticket volumes signal further automation potential

15–30%
Potential network OPEX reduction from AI-driven operations[2]

"ERICSSON TODAY" Insight

The next maturity step is not more automation. It is making today's automation work as one enterprise system

Human effort shift from execution → exceptions, judgement & control

***Illustrative hypothesis based on current understanding of Ericsson's infrastructure spend and external benchmarks; subject to validation*

Source: 1.Ericsson Workshop pre-requirement doc., 2. E/// Autonomy by Design (2026); ETR, Intent-driven Autonomous Network Operations (2026); Ericsson, Service Orchestration for Autonomous Operations (2026)

Company Confidential © Capgemini 2026. All rights reserved.

Ericsson's future enterprise will connect strong domain capabilities around shared outcomes, trusted autonomy and enterprise control

Building on Ericsson's automation foundation, the future enterprise must establish common foundations, trusted data and explicit accountability to scale autonomy across domains

North Star

ONE CONNECTED, OUTCOME-LED, AUTONOMOUS & TRUSTED ENTERPRISE

2030 Ambition | 85% autonomous operations

Apply the appropriate mix of human judgement, deterministic automation, AI assistance and autonomous execution to each eligible service journey

Reactive incident handling → Proactive, event-led decisions and closed-loop execution

01 OUTCOME LED

Connect capabilities around shared enterprise outcomes

- Service reliability & employee experience
- Cost-to-serve & infrastructure efficiency
- Security, resilience & compliance
- Speed of change

FOCUS
Shared outcomes, explicit accountability

02 Common Foundations, Federation Execution

Standardize where scale creates value; retain flexibility where domain, market or regulatory needs require

- Common platforms, data, controls & interfaces
- Common data standards, ownership & trusted context
- Infrastructure sourcing: own, consume as-a-service, consolidate or orchestrate
- Preserve domain, market & regulatory flexibility

DESIGN
Common at scale, federated where needed

03 Decision rights by design

Design autonomy around decisions, not tools

- Incident triage & root-cause diagnosis
- Automate repeatable, policy-bound decisions
- AI-assisted operational decisions
- Human accountability for high-risk, regulatory or ethical decisions

EXECUTE
Machines for repeatability; people for judgement

04 Value, trust & control

Scale autonomy only where value & control can be demonstrated

- Cost-to-serve & infrastructure economics
- Resilience, continuity & availability
- Security, privacy, data & model sovereignty by regulation & geography
- AI cost & consumption transparency

GOVERN
Value demonstrated, trust earned, control retained

The goal is not to automate everything, but to scale autonomy where it makes a real difference, with right level of control

With the Autonomous enterprise vision established, the next question is how Ericsson should redesign its IT operating model, platforms and workforce to make this vision real.

We now turn to the operating model, enterprise intelligence layer and agentic workforce needed to scale AI across the enterprise.

Key takeaway: The vision defines where Ericsson wants to go; the next step is designing how the enterprise will get there.

Company Confidential © Capgemini 2026. All rights reserved.

WORKSHOP AGENDA

FROM THE SHIFT WE SEE → TO CHOICES ERICSSON CAN MAKE → TO WHAT WE CAN EXECUTE TOGETHER

1	VISION Why must Ericsson think differently ?	1.A	The World Is Changing →	Outside-in Perspective
		1.B	Ericsson Today →	Our Understanding
		1.C	Define The Future Enterprise →	Ericsson's vision of 2030
2	DESIGN THE ENTERPRISE What must Ericsson redesign?	2.A	Redesign the Enterprise →	Operating Model, decision rights, federation execution & partner accountability
		2.B	Build the Intelligence Layer →	Beyond individual AI Platforms
		2.C	Enable the Agentic Workforce →	Agentic Operations
3	ENABLE AT SCALE What will make autonomy trusted & scalable ?	3.A	Build Trust At Scale →	AI Governance, Control Towers, Responsible AI, & Sovereign AI
		3.B	Build the Intelligence Layer →	AI for Cyber Security, Autonomous Infra operations, AI Service Desk Strategy, NaaS

OUTCOME What should Ericsson do next ?	PRIORITIES Where to focus	USE CASES Where to win	EXECUTION PATHWAY How we get there

Company Confidential © Capgemini 2026. All rights reserved.

WHERE THE INDUSTRY IS HEADING

AI is moving from isolated use cases to embedded ways of working

Leading organizations are embedding AI into workflows, decision-making, governance & not simply adding AI tools to existing teams

The shift is not "Adding AI" to today's organization

It is changing how work, decision & accountability are designed

Illustrative pattern based on Capgemini client experience and industry research; maturity varies by starting point and context.

How leading organizations are actually adopting AI in their operating model

Across enterprises, four recurring patterns are emerging as AI moves from experimentation toward enterprise integration

A AI Experiments

- Local use cases
- Limited integration
- Local ownership

PROVE VALUE

B AI Embedded in Work

- Embedded in products / services
- Measurable outcomes
- Reusable components emerging

SCALE WITHIN DOMAINS

C AI-Enabled Operating Model

- AI across end-to-end workflows
- Common data / platforms / standards
- Clearer governance and accountability

INTEGRATED ACROSS THE ENTERPRISE

D AI-Native Enterprise

- AI embedded in enterprise processes
- Decisions increasingly AI-assisted / autonomous
- Continuous learning and optimization

EMERGING FRONTIER

The unit of change evolves → Use case (What) → Workflow (How) → Decision (Who) → Enterprise Operating model (End to end)

Company Confidential © Capgemini 2026. All rights reserved.

As AI scales, Ericsson can redefine the boundaries of ownership, decision rights & execution explicit

With automation already distributed across domains, markets and partners, Ericsson needs to clarify what stays enterprise-owned, what is federated to the service, and what the ecosystem can execute

Four operating-model choices Ericsson needs to resolve

Enterprise Control ↔ Domain Speed

Common standards, security and sovereignty must coexist with domain and market flexibility

Consistency & control where it matters

Service Outcome ↔ Provider Ownership

Critical services cross technology towers, internal teams and multiple providers

One service.
One outcome owners

Human Authority ↔ AI Execution

AI will increasingly diagnose, recommend and execute, but accountability cannot become ambiguous

The right decision.
The right authority

Reuse/ Scale ↔ Local Flexibility

Platform overlap and fragmented capabilities create duplication, while markets have legitimate regulatory and operational differences

Scale through reuse.
Flex where needed

How we help Ericsson move from principle to design ?

1 Design the boundaries

Enterprise / domain / partner ownership & decision rights

2 Design human + AI work

Roles, workflows & exception paths

3 Test & scale

Validate the model on priority service journeys; refine before wider rollout

Excerpts

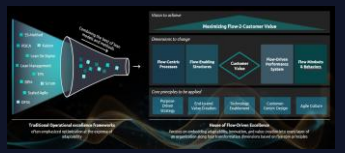

Our asset

AI Operating Model

Our guide helps organizations scale AI by assessing maturity, addressing operational challenges, and designing business-aligned operating models

Flow-Driven Excellence

Our approach supercharges flow transformation through value stream-aligned design and AI-powered optimization

Centralise what must be common. Federate what needs context. Retain Ericsson accountability where it matters

Company Confidential © Capgemini 2026. All rights reserved.

If the organizational workflows were built for a pre-AI world, that structure is now a potential bottleneck.

AI lifts individual productivity. Productivity at scale needs a different operating model.

Company Confidential © Capgemini 2026. All rights reserved.

A federated AI operating model can help Ericsson scale AI without fragmented control or accountability

Centralize what benefits from scale and control; federate what requires domain context and local execution

Illustrative

Why Change

Platform sprawl | Fragmented delivery | Data & knowledge silos | Unclear ownership | Multi-provider complexity | Sovereignty / local requirements

Sources/Inputs

Internal Demand
Business strategies, transformation programs, operational pain points

Data & Knowledge
Network, service /operations data, Enterprise knowledge, Partner & 3rd party data

External Context
Regulatory & compliance, Industry & technology trends, Competitive landscape

Enterprise enablers & constraints
Architecture landscape, Security & identity, Budget & funding

We are redesigning the Enterprise for AI Native operations

TRANSFORM

Leading Spanish Service Provider

AI-first digital transformation

one operating model

replacing fragmented vendor setups

Unified Data & AI platform
Standardized intake → production
Governed end-to-end execution

TRANSFORM + OPERATE

Leading Consumer Faced organization

Agentic AI Operating Model

AI-first digital transformation

across core value streams

One operating model

to support large-scale transformation

Agent-augmentation across consumer and sales execution
Top line and operational excellence
Improved innovation capabilities

Company Confidential © Capgemini 2026. All rights reserved.

Ericsson has built a strong automation foundation. The priority now is to evolve how ownership, decisions and execution work as AI scales across services, domains, markets and partners. This is not about wholesale reorganisation, but about clear accountability, federated execution and defined boundaries for AI and partners.

We now turn to Building the Enterprise Intelligence layer moving beyond isolated AI tools toward a common intelligence foundation for Ericsson

Key takeaway: Ericsson’s AI journey is about more than technology. It is about redesigning how work, decisions and accountability operate as AI moves from assisting people to executing within defined boundaries

Company Confidential © Capgemini 2026. All rights reserved.

WORKSHOP AGENDA

FROM THE SHIFT WE SEE → TO CHOICES ERICSSON CAN MAKE → TO WHAT WE CAN EXECUTE TOGETHER

1	VISION Why must Ericsson think differently ?	1.A	The World Is Changing →	Outside-in Perspective
		1.B	Ericsson Today →	Our Understanding
		1.C	Define The Future Enterprise →	Ericsson's vision of 2030
2	**DESIGN THE ENTERPRISE** **What must Ericsson redesign?**	2.A	Redesign the Enterprise →	Operating Model, decision rights, federation execution & partner accountability
		2.B	**Build the Intelligence Layer →**	**Beyond individual AI Platforms**
		2.C	Enable the Agentic Workforce →	Agentic Operations
3	ENABLE AT SCALE What will make autonomy trusted & scalable ?	3.A	Build Trust At Scale →	AI Governance, Control Towers, Responsible AI, & Sovereign AI
		3.B	Build the Intelligence Layer →	AI for Cyber Security, Autonomous Infra operations, AI Service Desk Strategy, NaaS

OUTCOME
What should Ericsson do next ?

PRIORITIES
Where to focus

USE CASES
Where to win

EXECUTION PATHWAY
How we get there

Ericsson can simplify its AI estate through a governed enterprise intelligence layer

Focus should be to connect existing platforms, models, data, knowledge and agents through common services and orchestration. Reducing duplication and cost without constraining innovation or sovereignty

As Is State……

Platform Duplication | Capability Overlap | Token Costs | Governance Complexity

AGENT CONTROL PLANE

- Identity & Trust Governance
- Action & Policy Governance
- Safety, Monitoring & Observability
- Audit, Compliance & Evidence
- AgentOps & Value Optimization

BUSINESS CONSUMPTION LAYER

Technology | N/W Ops | Digital Workplace | Engineering | Corporate Functions

PERSONALIZATION

Human in the loop through agents personalization and extensions

Human - AI Chemistry

ENTERPRISE AI BROKER & ORCHESTRATION LAYER

Model Routing | Cost Optimisation | Digital Workplace | AI Governance | Sovereignty

AGENTIC MODELS & ENTERPRISE INTEGRATION

Models benchmark, serving, training, fine-tuning
Enterprise tools & systems access through managed APIs / MCP

MULTI-MODEL AI ECOSYSTEM

Instead of 1 model OpenAI, Bedrock, Glean etc. broker routes workload dynamically.

Agentic protocol (MCP + A2A)

ENTERPRISE KNOWLEDGE FABRIC

Knowledge Graphs, RAG Platform, Vector Services, CMDB, Ops Data, Runbooks

SYSTEMS OF RECORD

Composable Core Enterprise & operations systems (incl. transaction truth and compliance)

AGENT FABRIC

The combination of tools and platforms for building, evaluating and deploying agents and their integration with enterprise resources

- Agents Gallery & Market Places
- Agentic workflows, contexts & orchestrations – low/pro code tools
- Agentic integration with enterprise resources - AI models, data & knowledge products, business operations systems

Broker-led Consumption | Platform Consolidation | AI Cost Consolidation | AI Control Tower

……Future State

Company Confidential © Capgemini 2026. All rights reserved.

Ericsson's challenge is not selecting the best AI platform but assessing the multiple AI platforms, Eliminate Overlapping Investments, Optimizes token consumption & Protect sovereignty

6 Pillar AI Platform Rationalization Model

Business Value & Adoption Rate

Understand whether each AI platform is creating differentiated business value or simply duplicating capabilities

1. Enterprise AI Adoption Rate
2. % of Strategic Business Capabilities AI-Enabled
3. Enterprise-wide Productivity Gain (%)
4. Employee Experience Impact (eNPS/CSAT)

AI Platforms Capability Overlap

Assess the Capability overlaps across Platforms, OpenAI, Glean, Bedrock etc

1. Duplicate Capability Index (%)
2. Investment Duplication Exposure (€ at risk from overlap)
3. Strategic Capability Redundancy Index (%)
4. Shared vs Unique Capabilities (Ratio)

Cost Efficiency AI Platforms & FinOps

Address the overall per token costs incurred across employes, Business units, ROI

1. Total Cost of AI Ownership (% of Tech. budget)
2. Token Cost per employee/Transaction (€)
3. Incurred Cost per AI use case (€)
4. Cost Avoidance from Platform Rationalization (€)
5. Use Cases Enabled/ Platform (Value)

AI Governance & Control Tower

Working of AI governance is dependent on 3 pillars: Robustness, Ethics & Lawfulness

1. Enterprise AI Risk Exposure Score (Value)
2. AI Governance Maturity Level (Stage 1–5)
3. Platform Auditability Index
4. Regulatory & Compliance Readiness Index (%)

AI Platform Autonomy Enablement

Track enterprise progress toward Ericsson's 2030 ambition of 85% autonomous operations

1. Enterprise Autonomous Operations Maturity Level
2. Enterprise Workflows Operating Autonomously (%)
3. Self Healing Coverage %

AI Platform Sovereignty

Calculate the Data Sovereignty, AI Platform Sovereignty, Knowledge Sovereignty & Agent Sovereignty

1. Sovereign Workload Coverage %
2. Critical Workloads Meeting Sovereignty Mandate
3. Regulatory Sovereignty Compliance Rate (%)

Targeted Outcomes*

	2027	2030
Platform Rationalization	30%-40%	60%-70%
Shadow AI Reduction	20%-25%	70%-80%
Potential AI run-cost reduction	20%-25%	50%-60%
Token Rationalization	20%-25%	40%-50%
Governed AI Estate	70%	100%
Manual Intervention	<40%	<15%
Autonomous Operations	50%	85%
Sovereign coverage for critical AI workloads	60%	100%

**Illustrative hypothesis based on current industry benchmark*

Company Confidential © Capgemini 2026. All rights

An enterprise knowledge fabric enables AI implementations to work effectively

By providing a solid foundation for harnessing the power of data

Company Confidential © Capgemini 2026. All rights reserved.

Enterprise AI fabric that enables governed multi-model AI adoption, eliminates redundant investments, optimizes token consumption, & a scalable foundation for autonomous operations & enterprise-wide AI adoption.

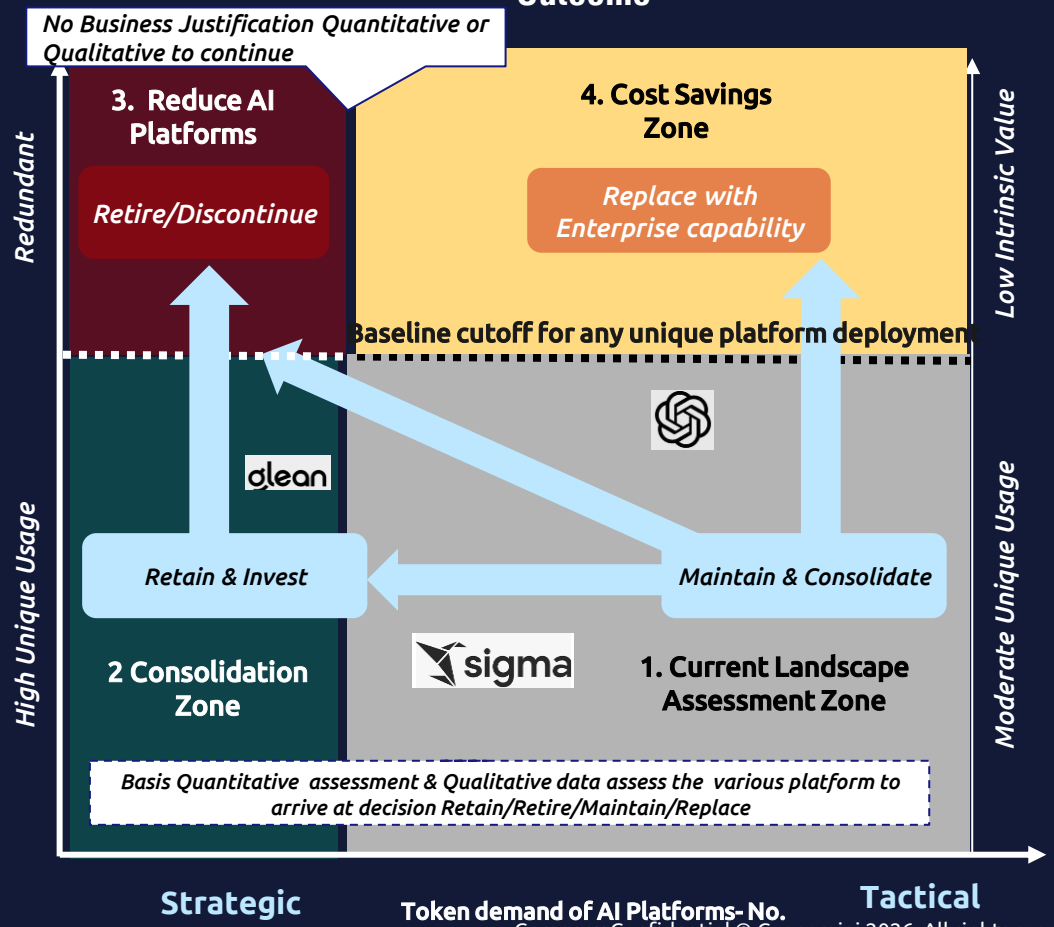

Strategic Business Value Assessment AI Landscape

- Platforms create business value
- Platforms with Duplicate capabilities
- Strategic or Tactical
- Active Usage vs Cost Case
- Overlapping & Seamless Agentic Workflow

Financial Metrics	Value Metrics	Value*
Monthly Active User	Cost per Prompt (AI Costs/ AI Requests)	5000
AI Adoption Rate	Cost Per Use Case (AI Spend/ Business Spend	45%
Use Cases Enabled	Use Cases Enabled/ Platform	43
Productivity Gains	Productivity Gains/Platform	10%
Costs Savings	Total Savings/Total Spend	1 m$

Strategic Parameters	Measurement Index	Value*
Functional Duplication Index	Duplicated Capabilities/ Total Capabilities	High
Application Redundancy Rate	Number of Similar Platforms/ Total AI Platforms	High
Enterprise Capability (OpenAI, Glean etc. each)	Enterprise Search, Assistance, Analytics, Agent Creation & Handover	Very High
Security & Control Risk	High/Moderate/Low	H/M/L
Total Weighted Score		**60**

*Sample Value

Company Confidential © Capgemini 2026. All rights reserved.

Ericsson should centralize data governance while keeping accountability close to where data is created and used

Enterprise-wide policies, standards and assurance create consistency, while markets, data owners, platform teams and partners remain accountable for data quality, access and compliant use

Ericsson Ecosystem

What gets impacted and where it resides

Who creates the data and who touches it

Employee Data	Infrastructure & Apps Monitoring	Support Channels	Partners	Infrastructure Landscape	Cross Geo Support
• Trouble tickets • Service requests • Employee Details	• End User compute • Application Monitoring • Device Usage	• HR & workplace, • Security • Administrative support	• Vendor and • Managed service provider access	• Public cloud, private cloud & SaaS platforms • Data centers and regional infrastructure • Backups, Archives, DRC	• Cross-country support and global operations centers • Local Data Protection laws

Top..... *Data Ownership Scope* *Bottom....*

1 Central teams Ownership

- Single point of enterprise policy
- Classification standards
- Privacy framework
- Cloud guardrails,
- IAM standards,
- Vendor controls,
- Transfer mechanisms
- Compliance reporting

2 Market Teams Ownership

- Interpretation of local requirements
- Mandatory deviations
- Local approvals
- Regulatory engagement
- Country compliance evidence.

3 Data Owners Own

- Purpose of accessing data
- Classification of data Confidential, Commercially sensitive, Competitive, Public
- Permitted use, access, quality, sharing, and retention.

4 Platform Owners Own

- Ethnical enforcement of policy
- Data hosting, encryption, logging, backup, recovery, and deletion.
- Ethical Data Access & Expiry of access rights
- Application accessibility

5 3rd Party/Vendors Ownership

- Compliance with contractual scope and controls, but Ericsson retains governance and accountability for access to Ericsson-controlled data.
- Non-Disclosure Agreements
- Trainings & Mandatory disclosures

Company Confidential © Capgemini 2026. All rights reserved.

Strategic roadmap for data management

Globally governed, locally compliant, securely managed data across its lifecycle

1 Data Generation

✓ Enterprise data-source inventory and data collection standards.

- Discover and govern enterprise data sources.
- Minimize sensitive data exposure
- Automate risk detection and compliance

2 Discover & Register

✓ Data inventory, ownership register & data-lineage map with linkage to AI

- Establish enterprise-wide data governance
- Maintain end-to-end data visibility
- Map and monitor data movement across systems and vendors

3 Classify & Access

✓ Data classification, privacy assessment, and automated labeling for security compliance.

- Standardize and automate data classification
- Strengthen privacy and compliance controls
- Enforce trusted data usage

4 Policy Application

✓ AI ready policy catalogue and policy to control mapping.

- Centralize and govern data policies
- Enforce security and compliance standards
- Manage exceptions and operationalize governance

5 Data Treatment & Placement

✓ Data and workload-placement KPIs by classification and country.

- Implement consistent data controls across cloud and on-premises environments
- Strengthen security and access management
- Protect sensitive data and infrastructure

6 Governance & Control

✓ Country-specific data policy enforcement, classifcn, & anomaly auto-remediation.

- Establish compliant cross-border data transfers
- Assess and mitigate data privacy risks
- Enable continuous governance and compliance

Strategy Data Flow Model

Company Confidential © Capgemini 2026. All rights reserved.

BFSI Industry benchmarks| What is good & what can be adopted

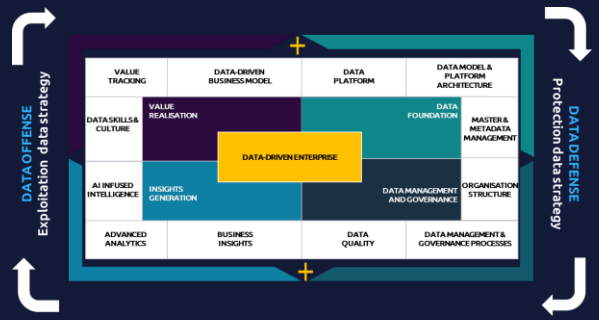

Financial industry has stringent future looking KPIs for Data Mgmt in terms of country specific regulation & benchmarks. Ericsson can setup the KPIs and cloud data management benchmarking some of these KPIs

Ericsson's Ask	Typical Value	Ericsson Applicability
1 **Core Banking / Payment System Availability** 2 **Open Banking API SLA**	99.9 -99.99% 99.9% uptime x sub-sec latency	• Benchmark for NaaS network uptime SLA target Ericsson's current ~99% goal) • Direct analog to the NaaS network-exposure API layer
3 **Fraud Detection Precision / False-Positive Rate** 4 **Sev-1 Incident MTTD / MTTR**	High precision, low FP <15 - 30 minutes	• Analog to AI-driven anomaly detection accuracy in network ops • Benchmark for autonomous incident detection & response speed
3 Z 4 **Third-Party Risk Management (TPRM) Score** **Vendor Concentration Risk Limit**	Tiered risk rating per vendor Risk Score %	• Framework for scoring & rationalizing the ~150-vendor estate • Basis for setting vendor-consolidation targets & ownership model
5 Z 6 **Regulatory Compliance Pass Rate** **Data Residency Compliance Rate**	100% (mandatory) 100% (regulatory mandate)	• Governance bar for agent / AI oversight • Benchmark for data/AI sovereignty requirements

Knowledge Management for Gen-AI

PROBLEM STATEMENT

Cisco sought to enhance their Knowledge Management (KM) practices to improve the accuracy of GenAI-driven solutions. The primary challenges included fragmented and inconsistent knowledge assets, a lack of a robust KM governance framework, and undefined KM practices, all of which exacerbated inefficiencies.

APPROACH

- Conducted a Maturity Assessment to evaluate existing KM systems, identify key gaps, and address governance deficiencies.
- Developed a KM Blueprint incorporating KM governance structures and operational principles and guidelines.
- Established Capgemini's KM GenAI Lab to curate diverse client assets, applying advanced metadata tagging and content generation techniques, and tested improvements in accuracy to validate the practical application and effectiveness of the blueprint.

OUTCOME

- Enhanced knowledge retrieval accuracy and improved GenAI outputs via our KM GenAI Lab, which served as a POC
- Proposed the deployment of a KM GenAI Lab for the client to operationalize and scale these improvements.
- Suggested the setup of a transition team to facilitate the implementation of KM governance in the next phase.

Driving AI Adoption

Context

Leading French Telecom partnered with us to accelerate the adoption of its internal AI assistant platform and unlock greater business value. The engagement aimed to build on initial efforts by driving broader usage, enhancing user experience, and ensuring alignment between AI capabilities and organizational priorities.

Challenges

- Existing usage focused on simple text manipulation, not on real business-critical tasks
- Low awareness and fragmented usage of AI tools across teams
- Lack of clear best practices and literacy on AI capabilities
- Limited engagement from AI champions community
- Disconnect between Data & AI roadmap and business priorities

Approach

- Conducted a comprehensive mapping of current tool usage, pain points, and unmet needs
- Designed and deployed custom GPT-based assistants tailored to team workflows
- Led AI literacy initiatives: best practices, news updates, and reactivation of AI champions community
- Collaborated with Data & AI team to align roadmap with evolving business requirements
- Updated company-wide best practices to integrate AI assistants into workflows

BENEFITS DELIVERED

25+
assistant delivered

15+
Champions onboarded

Some of the key transformations that we have done for our clients

Data Strategy

Leading Luxury Retail Company

Established an enterprise-wide data strategy for managing data as a product to improve overall value realization, governance and data health of the organization & to drive analytics initiatives to support their growth objective

Leading Technology solution provider

Developed data strategy and set up a CDO desk, implementing an MDM strategy that boosted operational efficiency by 20% and improved team coordination, reducing the delivery cycle by 30%

Data Foundation

Leading Financial Services Company

Developed a Data & AI platform which simplified and unified siloed data enabling data & AI project journey, along with increasing the key services / capacity offered by the platform

Leading Electric Infrastructure company

Strengthened the data foundation to enable data trust at scale, ensuring use case reusability capability along with a data sharing ecosystem. Data was brought at the core of all global strategic initiatives

Data Activation

Leading Pharmaceutical Company

Created NLP platform to accumulate interactions, notes obtained from customer interactions through teleconference or in-person meet, to enable HCPs promote the drugs better and improve patient engagement there by reducing the manual effort by 85% and increasing accuracy by 40%

Renowned Automotive Brand

Developed analytics solution for on-road test campaigns of development vehicles and provided extensive support on battery health monitoring. Conducted root cause analysis for vehicle failure signals. Developed a machine learning solution to identify the nearest charging stations for vehicles based on geo-spatial coordinates and distances

Ericsson can accelerate AI at scale by introducing a governed enterprise AI layer that unifies platforms, models, data, knowledge, and agents while reducing duplication, complexity and cost.

We will now discuss about the Agentic workforce and how AI is evolving into an operational workforce. Ericsson must determine how humans, digital workers and autonomous agents collaborate, including ownership, certification, monitoring and accountability.

Key takeaway: Don’t consolidate around single AI model; consolidate around a governed AI platform that orchestrate multiple models, enterprise knowledge, and AI agents securely, and cost-effectively.

Company Confidential © Capgemini 2026. All rights reserved.

WORKSHOP AGENDA

FROM THE SHIFT WE SEE → TO CHOICES ERICSSON CAN MAKE → TO WHAT WE CAN EXECUTE TOGETHER

1	VISION Why must Ericsson think differently ?	1.A	The World Is Changing →	Outside-in Perspective
		1.B	Ericsson Today →	Our Understanding
		1.C	Define The Future Enterprise →	Ericsson's vision of 2030
2	DESIGN THE ENTERPRISE What must Ericsson redesign?	2.A	Redesign the Enterprise →	Operating Model, decision rights, federation execution & partner accountability
		2.B	Build the Intelligence Layer →	Beyond individual AI Platforms
		2.C	Enable the Agentic Workforce →	Agentic Operations
3	ENABLE AT SCALE What will make autonomy trusted & scalable ?	3.A	Build Trust At Scale →	AI Governance, Control Towers, Responsible AI, & Sovereign AI
		3.B	Build the Intelligence Layer →	AI for Cyber Security, Autonomous Infra operations, AI Service Desk Strategy, NaaS

ERICSSON · TECH FOUNDATION · RENEWAL EXERCISE

RENEWAL WINDOW: NEXT 12 MONTHS

Autonomous Internal Operations — Target Model

Shifting internally-managed infra, platforms & employee support from managed-service ops to agentic, AI-orchestrated operations

PRIVATE CLOUD & DATA CENTERS

Private cloud infra, data centres & edge landscape

- Agent: predictive capacity planning & self-healing infra
- Savings: 15–25% infra opex · Benchmark: ~20% (AIOps avg)

IDENTITY & ACCESS

Partial ownership of access management

- Agent: automated provisioning / deprovisioning & access reviews
- Savings: 30–40% access-ops effort · Benchmark: ~35% faster

TOOLS & OBSERVABILITY

Infra tooling & observability platforms

- Agent: AI anomaly detection & alert-noise reduction
- Savings: 20–35% alert noise · Benchmark: ~30% (industry avg)

CLOUD FINOPS

~$350M/yr cloud infra spend · scenario optimization

- Agent: continuous rightsizing & scenario modeling
- Savings: 10–20% cloud spend · Benchmark: ~15% (FinOps Fdn)

AI PLATFORMS & HYPERSCALERS

GCP · AWS Bedrock · agentic AI use cases

- Agent: orchestrates agentic workflows across platforms
- Enabler layer · Benchmark: 2–3x faster use-case delivery

AGENTIC AI ORCHESTRATION

Decisions across infra, access & FinOps

Continuous feedback retrains orchestration policies

EMPLOYEE IT TICKET — AUTONOMOUS HANDLING WORKFLOW

Ticket Raised

- Agent: auto-captures context from chat/email/portal
- ~90% less manual logging · Benchmark: <1 min capture

AI Triage & Classify

- Agent: NLP intent & priority classification
- 50–70% faster triage · Benchmark: ~60% (industry avg)

Autonomous Remediation

- Agent: executes fix via playbooks/APIs, no human touch
- 30–50% ticket deflection · Benchmark: ~40% (Gartner)

Resolved / Smart Escalation

- Agent: auto-closes or routes with full context
- 20–30% faster MTTR · Benchmark: ~25% avg

Learn & Optimize

- Agent: retrains models from outcomes & feedback
- Compounding gains · Benchmark: 5–10%/qtr uplift

~$350M/yr cloud infra spend · **Renewal:** next 12 months · **Objective:** managed-service ops → autonomous, agentic ops · End User Computing/devices de-scoped (org strategy)

Savings %/benchmarks are illustrative industry ranges (AIOps, FinOps, ITSM literature) — validate against current data before external use.

Agentic operations: orchestrating End-to-End autonomous service recovery

AI agents collaborate across observability, ITSM, automation, knowledge, & operational domains to accelerate Ericsson's journey from 40-45% auto-healing today to 85% autonomous operations by 2030.

0 Agent continuously correlates events, service dependencies, CMDB, monitoring signals and business impact indicators to detect emerging service issues before user disruption.

Key Triggers

1.Infrastructure deviation detected
2.Network degradation detected
3.Endpoint experience deterioration
4.Capacity threshold breach
5.Security policy violation
6.AI prediction of impending outage

Grafana

Sense & Correlate

Intent Monitoring & Reporting
Anomaly detection & Trigger

1 Agent evaluates affected applications, users, business services, geographies and operational risk to prioritize response activities.

elastic

Correlation Agent

Check Policy & Risk

2 Agent assembles operational context from observability platforms, ITSM, runbooks, knowledge graphs and historical incidents to determine probable root cause and remediation options

Diagnostic Agent

Human in Loop

3 Agent validates remediation actions against governance policies, compliance controls, cybersecurity requirements and autonomous execution thresholds.

Orchestration Agent

Execute Within Authority

4 Agent orchestrates approved remediation actions across infrastructure, cloud, network, endpoint and application domains using existing automation platforms and workflows.

SOVEREIGN AWARE

Execution Agent

Problem Resolved & Feedback Captured

5 Agent validates service restoration through telemetry, synthetic monitoring, user experience signals and business impact measurements.

Verification Agent

Incident Notification

6 Agent captures lessons learned, updates knowledge repositories, improves remediation models or escalates exceptions requiring human intervention.

CMDB

Knowledge Agent

What's the Change

01 **Agent sense & Correlate to assess the impact against triggers.** Key Enabler is Intent Engine & Persona Framework. Outcome is Context aware incident detection.

2 **Agent's job is to Diagnose & Plan. Use Catalogue library** Key Enabler is MCP Integration Layer, Knowledge Graph, Runbooks, Historical intelligence. **Outcome is AI driven RCA & Remediation Planning**

3 **Safe autonomy with Agent's policy & Control .** Key Enabler is Governance Control Tower, RAISE, & Guardrail framework. Outcome is Human governance, Responsible AI, Controlled autonomy

4 **Agent execute within authority .** Key Enabler is MCP controller, Automation Platform, ServiceNow, Infra APIs, N/W automation tools. Outcome is Closed loop remediation & mature self healing

5 **Agent validates the recovery** Key Enabler is CX measurement pack, Observability layer. Outcome is auto restoration & business impact assessment

6 **Agent learns or escalates.** Key Enabler is AI learning loop, runbook. Outcome is reduced incidents, cost efficiency, CX improvement.

Capgemini defines the strategy, governance, operating model and sovereignty roadmap, building the AI fabric, knowledge layer, agent ecosystem towards Ericsson's 2030 ambition of 85% autonomous operations.

4 Key Parallel Programs towards Autonomous Sovereignty

1. Enterprise AI Fabric

1. Private cloud, data centre & edge infra rationalization
2. Hyperscaler assessment (GCP, AWS Bedrock)Cloud FinOps & scenario-based cost optimization (~$350M/yr spend)
3. Transition/exit planning ahead of contract renewal

0,1

- **Reduced cloud platform sprawl & duplicate spend**
- **Rationalized Hyperscaler footprint**
- **10–20% cloud cost reduction**
- **Renewal-ready infra baseline**

2. Identity, Tools & Observability Sovereignty

1. Identity & access management modernization
2. Observability & tooling consolidation
3. Knowledge graph & CMDB integration
4. Tooling sovereignty & vendor rationalization

2

- **Unified observability & tooling**
- **Modern IAM reducing access risk**
- **Faster root-cause via knowledge graph**
- **Reduced tooling license cost**

3. Agent Control Tower & Governance

1. Agent governance & guardrail framework
2. Renewal governance: incumbent transition/exit management
3. Risk, compliance & shadow-AI controls
4. Agent lifecycle management across infra, access & FinOps

3

- **Agent governance & guardrails in place**
- **Controlled autonomy with audit trail**
- **De-risked incumbent transition**
- **Compliance-ready operating model**

4. Autonomous Operations Program

1. Autonomous IT ticket handling (triage, remediation, escalation)
2. Dark-NOC style operating model for internal support
3. End User Computing hand-off (de-scoped per org strategy)
4. AI-native operational metrics & value realization office

4,5

- **Majority of employee tickets auto-resolved**
- **Dark-ops model for internal IT**
- **EUC cleanly handed off**
- **Improved employee experience & cost efficiency**

Ericsson Outcomes: Journey 2030

Company Confidential © Capgemini 2026. All rights reserved.

With the AI driven Agentic operations framework established, Ericsson can transition from 40-45% auto-healing today to 85% autonomous enterprise by 2030 through intelligent, governed, end-to-end service automation.

We now turn to Building Trust at Scale – Ericsson must embed trust before scaling autonomy. Governance should define AI Control Tower capabilities, responsible AI principles, sovereign AI, compliance, enterprise risk and agent governance along with secure autonomous operations principles

Key takeaway: AI agents continuously detect, diagnose, remediate verify, and learn from incidents, enabling closed-loop autonomous operations while maintaining governance, risk controls and himan oversight.

Uncontrolled shadow AI sprawl leads to multiple risks and their associated implications

Unregulated use of AI tools and platforms leads to security, financial and compliance risks

Security

- Data Leakage
- Expanded attack surface
- Unregulated access management

Financial

- Redundant spending
- Uncontrolled corporate costs
- Increased breach costs

Compliance

- Regulatory violations
- Loss of data integrity
- Unauditable usage

A scalable AI governance layer consolidates shadow AI sprawl and delivers measurable business value by reducing cost, fragmentation and governance complexity

Technology Foundation

Establish platform, data and AI foundations that enable shift towards an AI native organization

Sovereignty, Regulatory & Compliance

Establish an AI TOM and Risk & Compliance Framework to embed lawfulness, robustness, and ethics into organizational processes, roles, and decision rights

Workforce Empowerment

Drive training, awareness, and literacy programs to build competence, foster a culture of responsible AI, and ensure sustainable, ethical adoption across business units.

Aligned to Ericsson's AI strategy and vision

- Autonomous Operations
- End User Experience Transformation
- Network Transformation

This needs a comprehensive governance mechanism that integrates operations, processes and culture, while securely accelerating AI and digital value creation

Company Confidential © Capgemini 2026. All rights reserved.

An AI control tower can act as a centralized governance body

	01	02	03	04	05
Tenets	**Governance & Decision Layer**	**AI Use Case Orchestration Layer**	**Value Realization layer**	**Knowledge Management Layer**	**Enabler and Cross Integration layer**
Design & Artefacts	▪ Define AI governance standards, policies, and guardrails consistent across Teams, Departments & geographies ▪ Establish Communication Plan, Policy adherence, use case deployment adherence w.r.t defined guardrails	▪ Manage the AI use case portfolio and assist/highlights challenges, dependencies, delays and deviations ▪ Responsible for consistency in methodologies, metrics, and deployment approaches	▪ Focus on exploiting measurable value for the AI Use Case deployment program ▪ Ongoing AI Use case embedded Value Tracking & Dashboarding	▪ Define Knowledge Management framework and share across team ▪ Maintain reusable assets, training materials and playbooks ▪ Track trainings, adoptions and failures of change	▪ Evolve the foundations for scalable, factory-style execution (data, tooling, processes, etc.) ▪ Continuously review data, tooling, processes, and automation readiness

Sovereignty maturity assessment framework | Measurement metrics

A structured methodology to assess Ericsson's maturity across five sovereignty pillars, benchmark current-state autonomy, identify gaps beyond industry norms, and define the roadmap toward 85% autonomous, resilient operations with future-ready KPIs and governance metrics.

	Modernized Forward Measurement Metrics	Mapped Areas
1	- % critical data classified - % data with residency enforcement - % encryption keys customer owned - Data portability score	*Sovereignty, Costs, Data Design & Control*
2	- % AI use cases governed - AI platform consolidation ratio - Model explainability coverage - GenAI compliance score	*Platforms (Gleen, OpenAI etc.) compliance, Costs*
3	- % knowledge sources governed - Vector DB ownership level - Enterprise Knowledge Graph maturity - RAG governance score	*Data Ownership, Sovereignty, IP Mgmt, Security*
4	- Agent inventory coverage - Agent auditability score - Human-in-loop coverage - AI control tower maturity	*Shadow AI Challenge, Governance & AI Adoption*
5	- Autonomous Resolution Rate - Self-healing coverage - Autonomous change execution % - Dark NOC maturity	*85% Autonomous Ops*

Building a sovereign AI-native enterprise foundation - strategic view

Assessing Ericsson's readiness across Data, AI, Knowledge, Operations and Enterprise Sovereignty to achieve 85% Autonomous Operations by 2030.

North Star View of Sovereignty Roadmap

- Control enterprise data
- Control ai ecosystem
- Security & sovereignty
- Govern AI workforce
- Operational Autonomy

1 Data & Cloud Sovereignty

- **Global Data Fabric & Residency Framework**
  - 1.1 Establish enterprise-wide and market wise data classification and residency policies
  - 1.2 Define data localization requirements by geography
  - 1.3 Implement policy-driven data placement and movement controls
- **Enterprise Data Governance & Ownership Model**
  - 1.4 Define and Categorize the Business owned data products
  - 1.5. Assess the Data stewardship model across business domains
  - 1.6 Establish global common data quality and lineage standards

2 AI Sovereignty

- **Enterprise AI Fabric**
  - 2.1 Rationalize OpenAI, Bedrock, Glean, SAP Joule, Sigma and other platforms & Establish Common orchestration layer
  - 2.2 Design a Federated model strategy
- **Sovereign Model Strategy**
  - 2.3 Define proprietary, open-source and commercial model portfolio with Selective local model hosting
  - 2.4 Design an Outcome driven global model portability across Hyperscalers

Company Confidential © Capgemini 2026. All rights reserved.

Building a sovereign AI-native enterprise foundation - strategic view

Assessing Ericsson's readiness across Data, AI, Knowledge, Operations and Enterprise Sovereignty to achieve 85% Autonomous Operations by 2030.

3 Knowledge Sovereignty

- **Enterprise Knowledge Graph**
  - 3.1 Consolidate structured and unstructured knowledge and link enterprise processes, assets & expertise
  - 3.2 Create reusable AI-ready knowledge layer (Capgemini AI enterprise layer model)
- **Sovereign RAG Platform**
  - 3.2 Enterprise-owned vector databases with Governed retrieval architecture & standardized knowledge pipelines
  - 3.4 Sensitive knowledge classification with AI training data controls. Secure external model interaction policies

4 Agent Sovereignty

- **AI Agent Control Tower & Workforce Controls**
  - 4.1 Agent inventory management and establishing Monitoring and audit trails
  - 4.2 Establish a centralized agentic governance and lifecycle management using an agentic control pane. Set up Human in loop controls with business rules driven autonomy in decision making
- **Single Agentic Platform**
  - 4.3 Standard and Enterprise-wide agentic Platform consolidating all individual platforms for functionalities, coverage, ROI and future autonomous operations roadmap perspective
  - 4.4 Move towards zero Shadow AI proliferation through Raise, Assess, Deploy, Operate Model

5 Operational Sovereignty

- **Autonomous Operations Program**
  - 5.1 Maturity driven assessment towards Dark NoC ops with base foundation of Self healing, self optimizing, close loop remediation & finally predictive operations by 2030
  - 5.2 Enterprise-wide Agentic driven Architecture- Cloud cost efficiency, risk mgmt, flexi operating model design
- **Network As a Service**
  - 5.3 Define a vendor consolidation strategy across agentic platforms, Cloud Infrastructure & Operations
  - 5.4 Define an Intent driven Network Optimization play in line with TMforum industry standards

Company Confidential © Capgemini 2026. All rights reserved.

Success Story

Telecom

We partnered with a national Norway telco provider to deliver a 100% sovereign AI

Context

A Norway Telco Company wanted to create a unique value proposition by providing a **trusted infrastructure** to meet the growing 62 for sovereign AI – a significant opportunity for topline growth.

Objective

Build Sovereign AI to:

- Offer access to secure AI infrastructure and computing capacity by using **existing secure data centers** to manage critical **national infrastructure**
- Provide **secure networks** and edge computing capabilities enable the low-latency, high-bandwidth connectivity critical for AI workloads
- Allow for enhanced local AI capabilities and innovation **without reliance on foreign infrastructure**

Market size

+82

Billion usd

+14 NVIDIA × Telco AI factories

Our value proposition

Capgemini and NVIDIA have partnered with a leading telco together we have setup a state-of-the-art AI factory in record time

Northern Europe's first sovereign and secure GenAI Cloud Service, powered by 100% renewable energy

Best-in-class gpu-as-a-service

Access NVIDIA H100 GPUs for complex and AI workloads, without the hassle of managing complex, costly infrastructure.

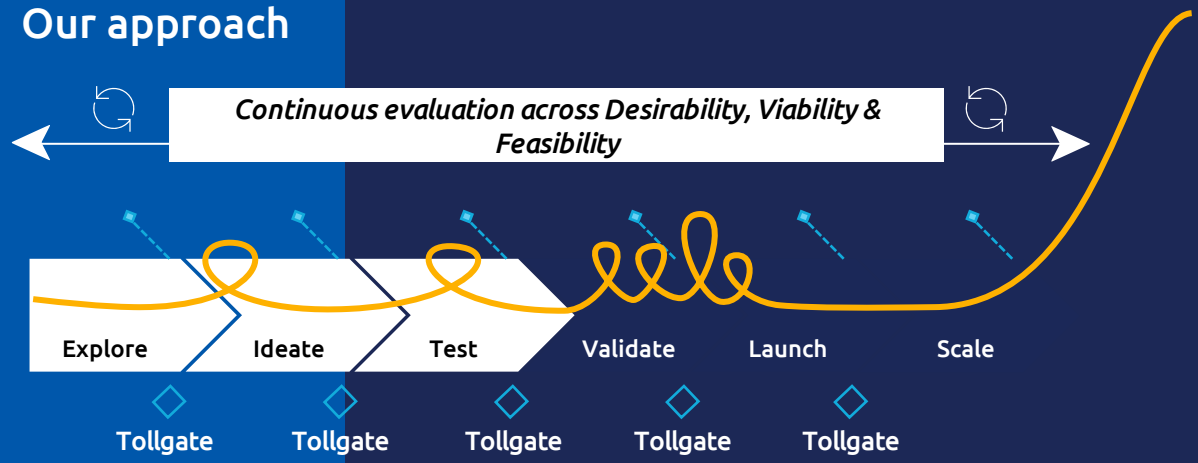

A firm commitment to sustainability

Reduce your environmental impact with AI workloads that run on clean energy and the most energy-efficient AI technology in the market.

A true sovereign cloud

Your data stays secure and compliant – safely stored and processed in Norway, nowhere else.

Our approach

CCompany Confidential © Capgemini 2026. All rights reserved.

A centralized AI Governance & Control Tower enables organizations to control Shadow AI, enforce sovereignty across data, AI, knowledge, and operations, and accelerate the journey toward secure, compliant, and autonomous AI-driven operations.

We now turn to operationalise autonomy and transformation where we will discuss AI for Cyber Security, re-inventing the employee experience and Network-as-a-Service.

Key takeaway: Controlled Tower-led AI governance is the cornerstone for transforming fragmented AI adoption into a sovereign, compliant, cost-efficient, and autonomous enterprise operating model.

Company Confidential © Capgemini 2026. All rights reserved.

Partnered with a leading telco in Europe to enable digital sovereignty through a trusted national cloud

CHALLENGE

- In pursuit of meeting the sovereignty requirements of the French State, public administrations and critical infrastructure companies with unique privacy, security and resiliency needs as determined by the French State, Orange and Capgemini wanted to set up a new company named Bleu
- Bleu aims to obtain the SecNumCloud 3.2 qualification in 2025 for its services to offer “cloud de confiance” based on Microsoft technology

APPROACH

- Capgemini was tasked with shaping the key pillars of Bleu, with three main streams during 12 months per stream creating a corporate structure, business function and platform
    - Corporate structure: creating agile functions, finance functions and back office
    - Business function: Developing the GTM and partner strategies
    - Platform: outlining the infrastructure in terms of technology, operations and security

CLIENT OUTCOMES

- During the past 19 months the Capgemini team has worked closely with Bleu to develop an end-to-end strategy and activation of its services – with sales of more than €1.5m 2023.
- All the services will be made available in 2025, certified by the French government to ensure it is cloud compliant with plans to offer GPU-as-a-Service as their first offering
- Developed a structured approach for trusted AI

Data and AI Sovereignty **Technology Sovereignty** **Operational Sovereignty** **Legal & Jurisdiction Sovereignty**

Design and deployment of a company-wide AI adoption and enablement program for a leading European telecom operator

Capgemini supported the client in the design and deployment of a company-wide AI adoption and enablement program, focused on building awareness, capability and impact around Microsoft Copilot and Generative AI tools. The initiative covered all organizational layers (strategic, tactical, and operational) and aimed to boost both cultural adoption and productivity through targeted training, content creation, and AI use case workshops.

Under the broader challenge of GenAI adoption, the project is exploring and is working on:

- Real-life productivity use cases with Copilot tools (Word, Outlook, Excel, Teams, Loop).
- Strategic AI use cases that impact business units' operations, explored through tailored workshops and roadmaps with internal “AI Champions”.
- Use case discovery sessions with key departments to tailor future deployments.

The project is structured around **3 levels of engagement**:

- **Strategic:** high-level awareness and vision-setting with directors and leadership teams, using inspirational use cases and storytelling.
- **Tactical:** specialized tracks for AI Champions and middle managers to empower decentralized enablement and identify business-relevant use cases.
- **Operational:** scalable training and onboarding paths for all employees with hands-on sessions, content, and FAQs for GenAI tools.

Sessions are being delivered via hybrid models (virtual and on-site), supported by workshops, co-created content, digital guides, video explainers, and practical toolkits.

BENEFITS

+1,200 users to be trained across all organizational levels

80+ training and enablement sessions planned

200+ AI use cases documented and scored to inspire local application

Company Confidential © Capgemini 2026. All rights reserved.

WORKSHOP AGENDA

FROM THE SHIFT WE SEE → TO CHOICES ERICSSON CAN MAKE → TO WHAT WE CAN EXECUTE TOGETHER

1	VISION Why must Ericsson think differently ?	1.A	The World Is Changing	→ Outside-in Perspective
		1.B	Ericsson Today	→ Our Understanding
		1.C	Define The Future Enterprise	→ Ericsson's vision of 2030

CYBER SERVICE MODERNIZATION

Evolution toward AI-assisted autonomous cyber operations

Stage	Operating focus	Representative services	AI / automation role
1. Reactive Security (Legacy)	Respond after incidents occur	Antivirus, firewalls, basic incident response	Human-led, ticket-driven operations
2. Proactive Security	Predict and prevent attacks	Threat hunting, vulnerability management, risk-based controls	Analytics-assisted prioritization
3. Adaptive Security	Continuous monitoring and real-time response	SIEM, SOAR, XDR, detection engineering	Automation-assisted response
4. Integrated & Automated Security	Unified defense across cloud, identity, endpoint and network	Cloud security platforms, MXDR, AI-driven analytics	Orchestrated workflows and data enrichment
5. AI Frontier SOC (AI-assisted autonomous)	AI at the front and center, with governed autonomy	AI-assisted triage, investigation, response playbooks, CTEM, ASM	AI agents assist; humans govern high-impact decisions

Company Confidential © Capgemini 2026. All rights reserved.

AI Cyber Frontier Models

GTM offering pitch: cybersecurity at machine speed

What are Cyber Frontier Models?

Newest generation of AI models that have exceptionally strong software engineering and cybersecurity capabilities—far beyond traditional LLMs

Examples

Gemini Advanced Security	Anthropic Mythos Preview
OpenAI Security Agents	GPT-5.5 + Codex Security
Microsoft Security Copilot	Claude Opus 4.7
	Claude Security
	MDASH

Why this matters

AI is compressing the time from vulnerability disclosure → exploit development → attack execution from weeks or months to hours and minutes

→ Monthly patch cycles are no longer sufficient

→ Traditional SOC's can't scale

Business impact

Increased attacks
Cyber Resiliency under significant risk
Impact to reputation
Down times and revenue loss

Our Solution

AI-Powered SOC
Unified Threat Management (AI led Penetration Testing)
Continuous Patching

Client value proposition

Protection from AI led attacks
Better Cyber Resilience
Reduced attack exposure
Longer run – reduced costs

Cyber Frontier Models are redefining cyber resilience by enabling organizations to predict, prioritize and respond to threats at machine speed

Company Confidential © Capgemini 2026. All rights reserved.

Company Confidential © Capgemini 2026

AI-Powered SOC - Our Approach

Our platform reduces threats, compresses attack surfaces, and continuously optimizing operations

modern SOC, moving away from manual / human monitoring

Business value driven through AI-driven Autonomous defense systems

Reduce risk

Greater ingestion

- Monitor AI deployed for the SOC
- Track SOC AI maturity
- Use best practices from vendors providing tools to secure AI
- No black-box security tools with pure paper trail

Greater productivity

Intelligent Triage

- Workload reduction
- Efficiency in the operating model
- L1 activities evolve or disappear
- ….

Process

Quality Detection

- Quality detection
- Simplify processes and redesign for AI
- Less waste in investigation and response
- Extend capabilities of analysts at all level

Resilience

Context Rich Insights

- Context rich insights
- Alert quality goes up
- Speed of decisions improves
- Visibility extends into new sub-domains

Company Confidential © Capgemini 2026. All rights reserved.

Company Confidential © Capgemini 2026

AI SOC capabilities across 6 stages of Attack Management

CISOs want pragmatic AI, that puts the right AI in place at the right time

AI SOCs have these characteristis

Detect & Alert

- AI shifts from signature matching to behavioral anomaly detection

Triage / Validate

- Autonomous Ai triage agents sit in front of the alert queue

Investigate / Analyze

- Swarming AI agents execute automated investigations (e.g., root cause analysis)

Response / Remediate

- Automations dynamically generate and execute precise response actions (e.g. close or escalate)

Summarize

- AI models act as intelligent traffic controllers at the ingestion layer

Continuous Improvement

- AI acts as postmortem summarizer and execute patching or vulnerability management

Automation & AI Productivity

Incoming Alerts

Before 36000 → After 31500 — 12% Reduction

MTTI – Investigate

Before 60 mins → After 20 mins — 67% Reduction

Alert Automation (closure + Triage)

Before through SOAR 50%+ → After ~90% — 40+% Reduction

MTTR

Before 3-5 days → After mins/Hours — 90+% Reduction

Quality Audit Compliance

Before 80% → After 98% — 90% improvement

MTTA

Before 15 mins → After 5 mins — 67% Reduction

SOC Scalability

2-3x growth without additional analysts

Identify Service improvements

Weeks --> Days

Company Confidential © Capgemini 2026. All rights reserved.

AI-NATIVE DELIVERY

AI in Cyber Delivery

Automation Initiative	Key Benefit
Email Phishing BOT	70–80% reduction in phishing triage effort
Security Dashboard	Real-time posture visibility; 60–70% less reporting effort
Unified Interactive Dashboard (All Towers)	Single-pane-of-glass view across all towers
Security Interactive Dashboard (All Towers)	Consolidated ops & security metrics
Threat Advisories Scrapping	Automated multi-source threat advisory collection
Enterprise Risk Dashboard	Enterprise-wide risk visibility & KPI tracking
Dark Web Monitoring Agent	Early detection of exposed credentials
Email Phishing Campaign Agent	Automated phishing campaign monitoring
CTEM Agent	Continuous exposure management automation
Agent Health Check	Automated scanner/agent health monitoring
AI Pentesting	Faster, wider-coverage AI pentesting

Deep-dive: Enterprise AI-Powered Vulnerability Management

Qualys VMDR + Azure OpenAI (ChatGPT/Copilot) + ServiceNow + Threat Intel — automates incident creation/closure for severity 4&5 and proactive vulnerability validation, with all data logged to Azure SQL and surfaced via Power BI.

Deep-dive: Secure Analyst AI Platform

4 AI agents (Code Scanning, Threat Modelling, Attack Path Mapping, PentestGPT) working together across the Secure SDLC — earlier risk discovery, better security decisions, faster penetration testing & reporting.

Company Confidential © Capgemini 2026. All rights reserved.

Framework Architecture & MDC Security Orchestrator

AI Progress — Framework Architecture (VRA/TPRM)

VRA AI Automation Workflow

1. Intake → 2. API Scans → 3. Priming → 4. LLM Report → 5. Review → 6. Monitor

External evidence scanned: DMARC/SPF/DKIM, HTTP headers & TLS, infrastructure exposure, Security Scorecard grade/trends.

MDC Security Orchestrator — Executive Summary

Problem Statement

Manual CSPM/Azure MDC monitoring delays fixes and adds overhead — 2–4 hrs manual effort per analyst/day, per account on triage & notification.

AI orchestration delivers ~40–50% efficiency gain in triage, notification & low/med-risk remediation.

Approach

- Assessment intake & prioritization
- Automated external validation
- AI-assisted risk analysis
- Leverage complementary third-party tools
- Governance & continuous monitoring

Maturity & Roadmap

- **Maturity: Pilots completed → Rollout in progress**
- **Next: SNOW integration (ticket lifecycle tracking)**

Company Confidential © Capgemini 2026. All rights reserved.

Agentic AI Framework for IAM Operations

1. Trigger & Intake

- ServiceNow tickets
- HR joiner/mover/leaver events
- Scheduled access reviews
- SIEM anomaly alerts

2. Agentic Reasoning & Orchestration

- LLM-based agent (via MCP) interprets the request
- Plans the required actions
- Selects the right tool/system to call

3. Execution Layer

- Orchestrates actions across Okta, Entra ID, SailPoint, CyberArk, BeyondTrust
- Provision, deprovision, certify, reset

4. Governance & Oversight

- Policy checks before execution
- Human-in-the-loop approval for high-risk actions
- Full audit trail for every agent decision

Framework Approach

Assessment → Top Contributors → Agentic AI → SNOW Mapping → Outcome → Next Steps

- L1 ~70% automatable (0–6 mo)
- L2 ~40% automatable (0–18 mo)

Top Use Cases

- Account Enable/Disable/Unlock
- MFA Reset / profile reset
- Security Group Mgmt (CRUD)
- Bulk account modification
- App login troubleshooting
- Role / Safe creation

Key Outcomes

- Faster cycle times (hours vs days)
- Reduced manual effort
- Consistent policy enforcement
- Continuous audit readiness

Company Confidential © Capgemini 2026. All rights reserved.

OUR POSITION

The destination is not unrestricted autonomy.

It is governed autonomy.

Machines may act independently only within explicit, observable, reversible and economically justified boundaries.

Automate	Augment	Autonomize	Humans own
deterministic	ambiguous	governable	consequential

Company Confidential © Capgemini 2026. All rights reserved.

Ambition is accelerating faster than readiness

Published Capgemini research shows a material gap between executive intent, scaled adoption, trust and foundational maturity.

2%

fully scaled agent deployment

<1 in 5

high data and technology readiness

27%

trust fully autonomous agents

38%

expect agents in human teams by 2028

The evidence supports intermediate, human-supervised autonomy before broad production authority

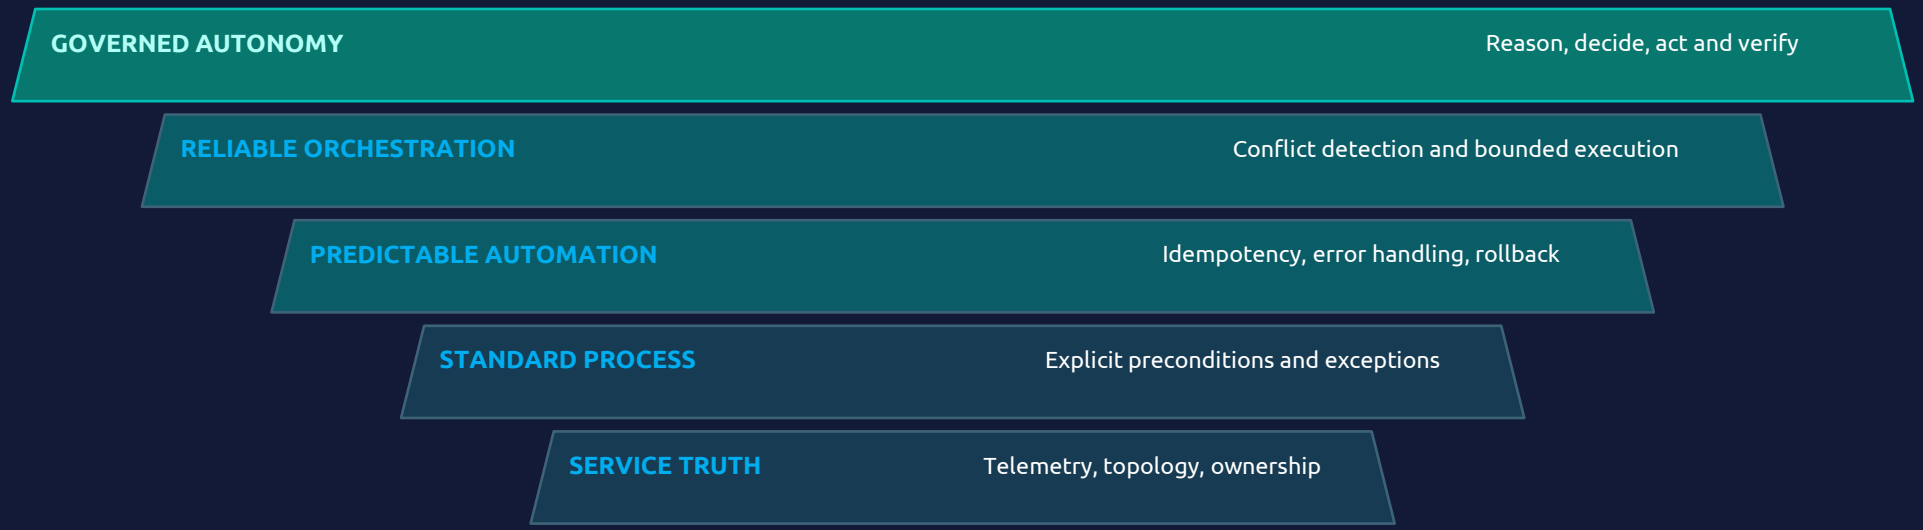

Company Confidential © Capgemini 2026. All rights reserved.

The missing foundation: predictability before autonomy

A deterministic script does not imply a predictable operating environment.

Unreliable automation does not become reliable autonomy by adding an intelligent agent.

It becomes unreliable automation with a broader decision surface.

Company Confidential © Capgemini 2026. All rights reserved.

What Capgemini would deliberately avoid

A credible autonomy strategy is defined as much by what it refuses to do as by what it enables.

1. Agents over unmanaged script repositories
2. A single LLM as decision authority
3. Workflow completion as the success measure
4. Probabilistic reasoning replacing deterministic controls
5. Dynamic production code generation and execution
6. Estate-wide credentials for agents
7. Autonomy before tested rollback
8. Headcount commitments before demand is removed
9. Confidence scores treated as correctness
10. The same agent diagnosing, authorizing and verifying
11. Scaling before exception costs are understood
12. Lock-in to one model, framework or protocol

Company Confidential © Capgemini 2026. All rights reserved.

Capgemini’s practical operating doctrine

Deterministic where possible. Probabilistic where valuable. Human-governed where consequential.

Agents select and coordinate. Certified automation executes. Independent controls determine whether authority continues

Company Confidential © Capgemini 2026. All rights reserved.

Maturity should be measured by delegated authority, not technology

The target is conditional autonomy across selected services, not a universal fully autonomous endpoint.

Company Confidential © Capgemini 2026. All rights reserved.

Transforming our operating model, platform-based assets deployment, investing in our workforce and upskilling them with a refreshed set of skills

Hyper automation disrupts our client businesses. It also creates a huge opportunity to reinvent IT operations

- For the past 2 years, our clients started to deeply transform their business activities, driving hyper automation of their business processes
- AI has created new set of opportunities to touch areas where automation wasn't possible
- Our clients expect their providers to be more effective, more agile and fully aligned to support their business transformation
- Traditional IT operations based solely on Right Shoring and basic automation are no longer enough. IT services must experience the same level of hyper automation
- Capgemini is embracing this shift with a renewed workforce, augmented by powerful hyper automation platforms
- We are transforming its core infrastructure services to make this change real for our clients.

Company Confidential © Capgemini 2026. All rights reserved.

How do we get the foundation blocks and take up the maturity journey ?

AI-powered end-user experience

An omni-channel and digital end user experience powered by Cognitive and AI capabilities to automate requests fulfilment

Digital service management

Embed automation and AI in all layers of the service delivery to realize operational efficiencies and effectiveness and deliver operations at optimal costs. Optimize support and delivery teams for faster customer onboarding and enablement

Data driven

Harness the power of data for operations and business success. Effectively leveraging ML and AI to capture data insights, turn information into knowledge for a better decision making

Platform Centric

Platform centric approach and multi-modal deployment that leverage APIs and a data driven integration approach to integrate frictionlessly with the customers' ecosystem

Innovation and growth

Constantly innovate with our partners and vendors to maintain our customers' loyalty and grow our customer base

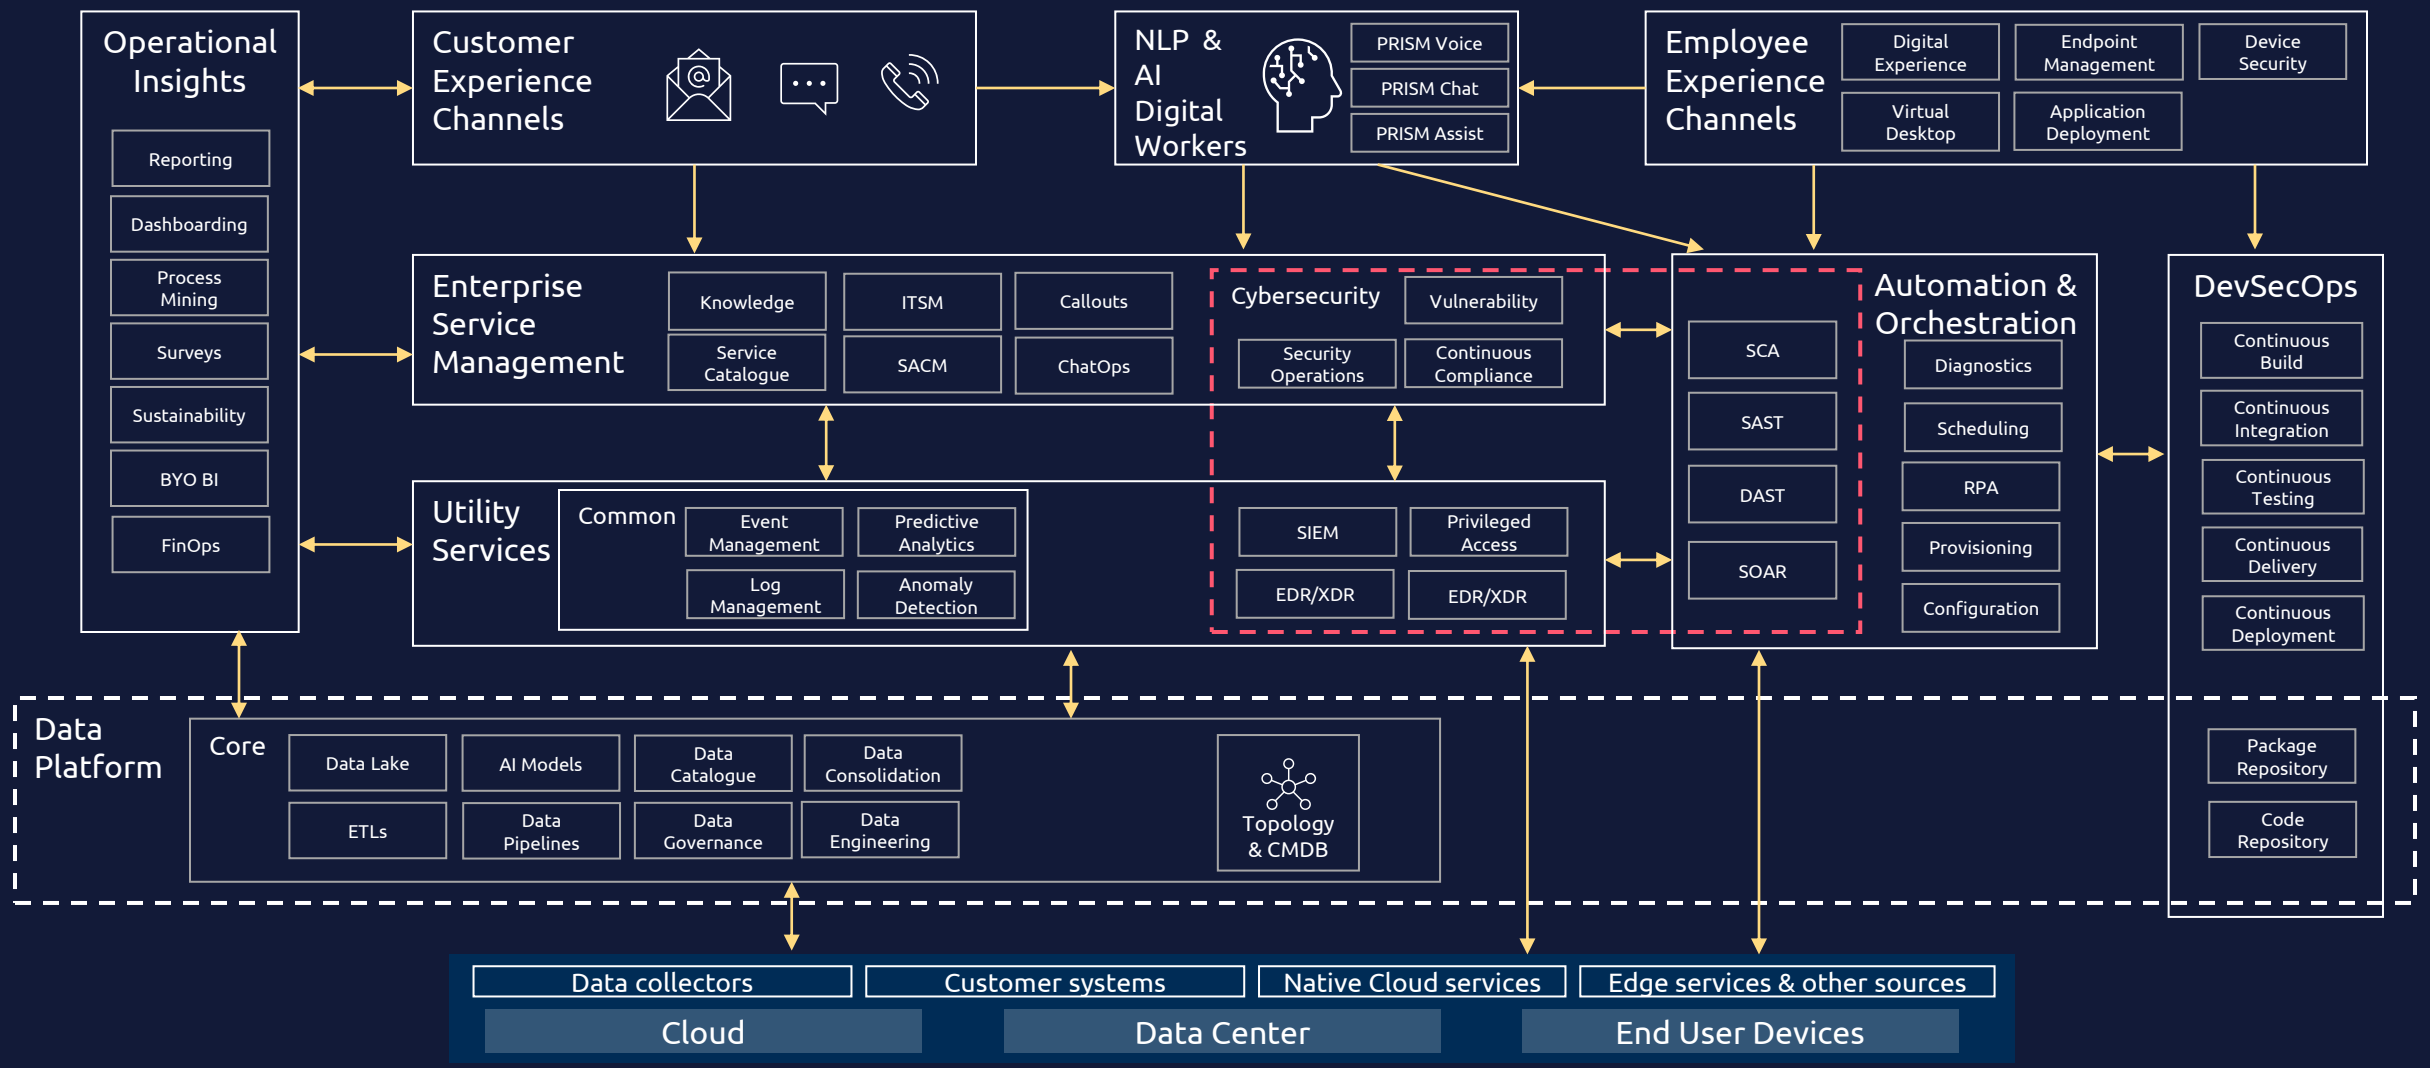

Maturity Journey

- **10-30%** inflow reduction through ESOAR and digital lean
- **80%** inflow processed by digital workers "zero touch"
- **75%** increase in employee experience metrics
- **95%** decrease of major incidents
- **70%** decrease of obsolete estate
- Faster onboarding for new clients

Company Confidential © Capgemini 2026. All rights reserved.

Functional Framework

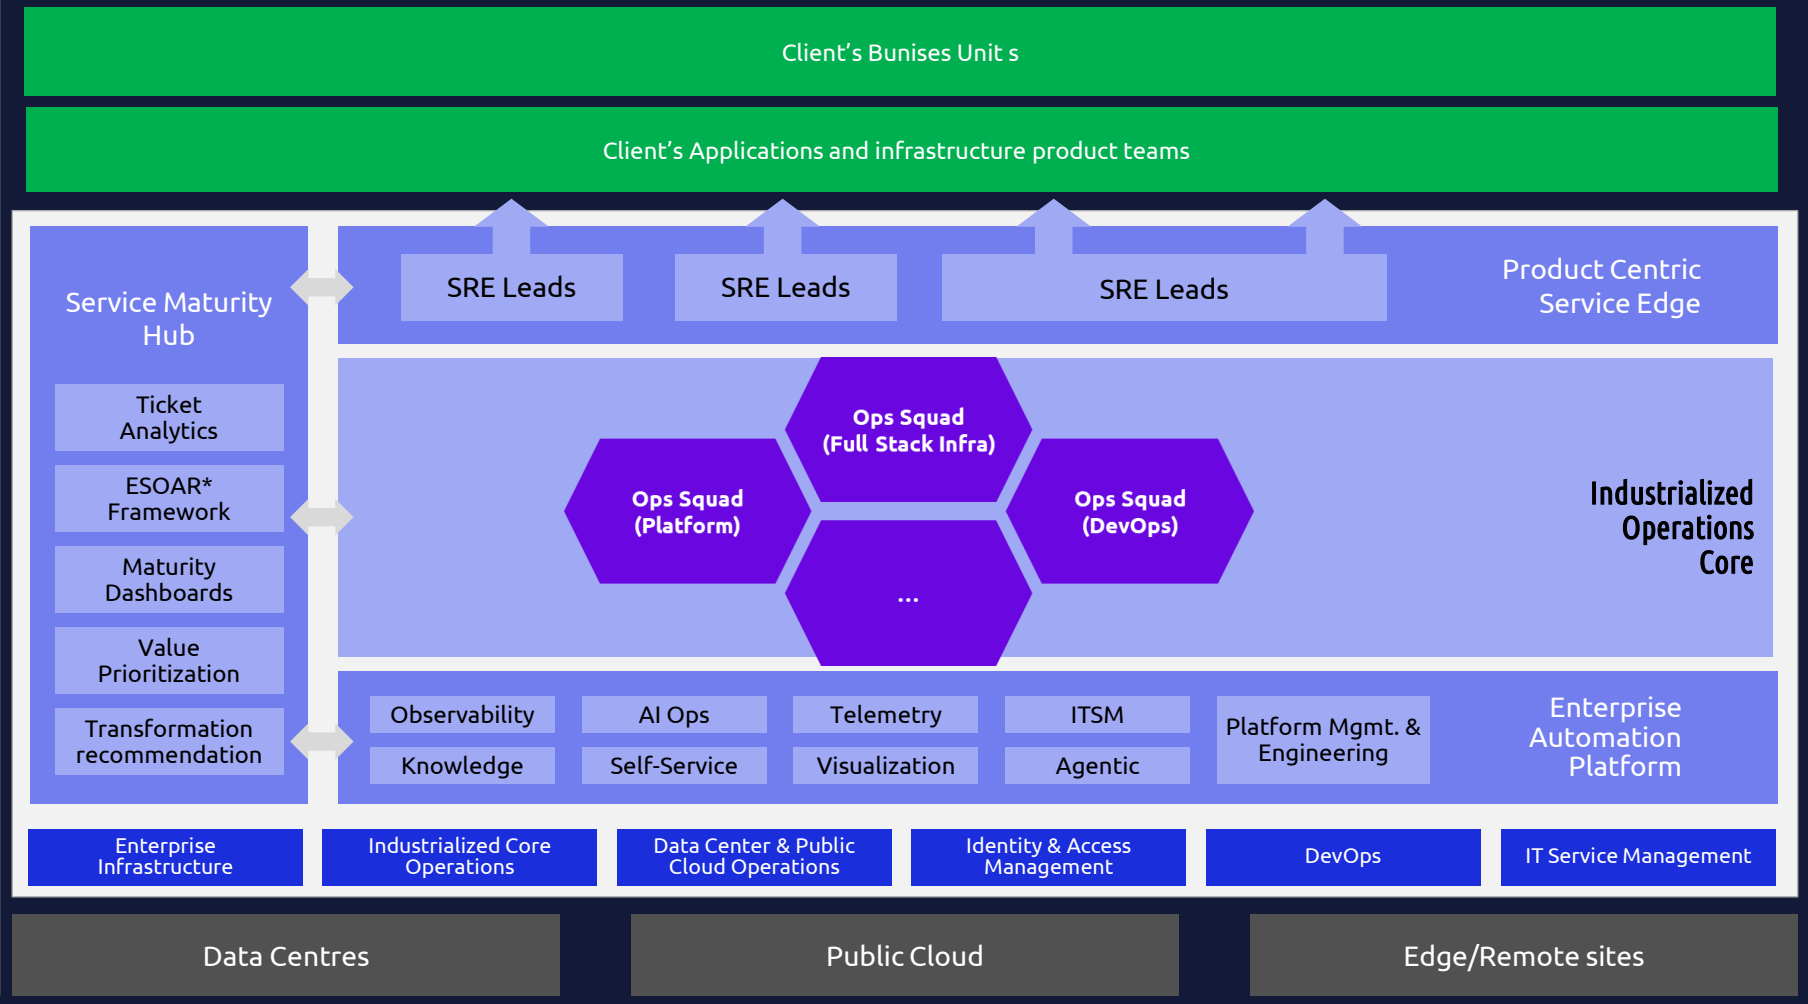

Improving, Advancing, and Accelerating Business with a Common Unified Services as a Platform (SaaP)

Company Confidential © Capgemini 2026. All rights reserved.

AI Powered Intelligent Operations Model

- Outcome based & customer-centric
- Data Driven Adoption & Improvement
- Platform Centric Highly Automated Delivery
- Run by people who understand AI, SRE, and DevOps

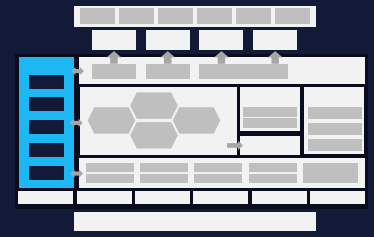

AI and data are why the old delivery model cannot survive

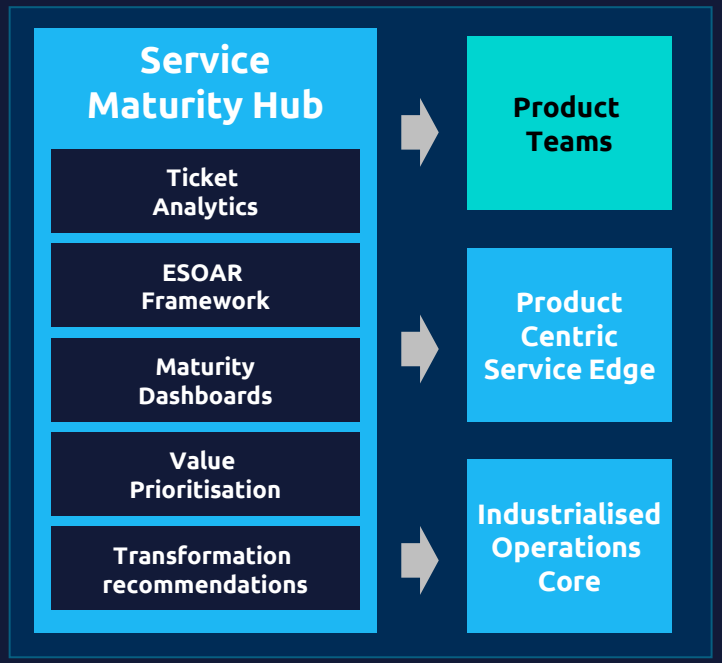

Company Confidential © Capgemini 2026. All rights reserved.

Zooming in to the Service Maturity Hub

The Service Maturity Hub acts as the central nerve centre for driving sustainable service maturity improvement powered by data & insights. It owns the relevant data and insights and works with Client to establish and drive the service maturity roadmap

PatternIQ

Ways of Working

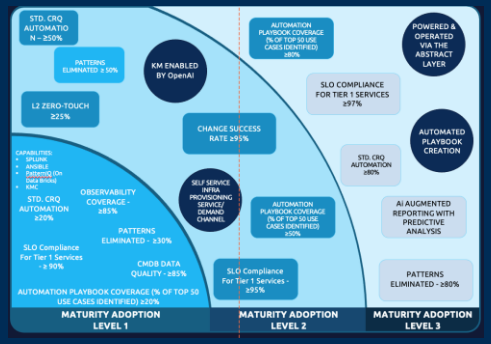

Continuous intelligence loop

Outcome-led and maturity-driven

Federated but centrally steered

Tightly coupled to Automation and AI -

The Service Maturity Hub is responsible for driving the service maturity journey

The Service Maturity Hub uses AI-powered service analytics tools to identify, measure and prioritise improvements and interventions

Company Confidential © Capgemini 2026. All rights reserved.

Process-led agent implementation: from a 143-agent inventory to evidence-gated release

CHALLENGE

- A 143-agent inventory risked becoming a technology catalogue—not an operating transformation.
- Value crossed five operating teams, fragmenting ownership and hand-offs.
- Feasibility varied with data, service context, automation, integrations, and controls.

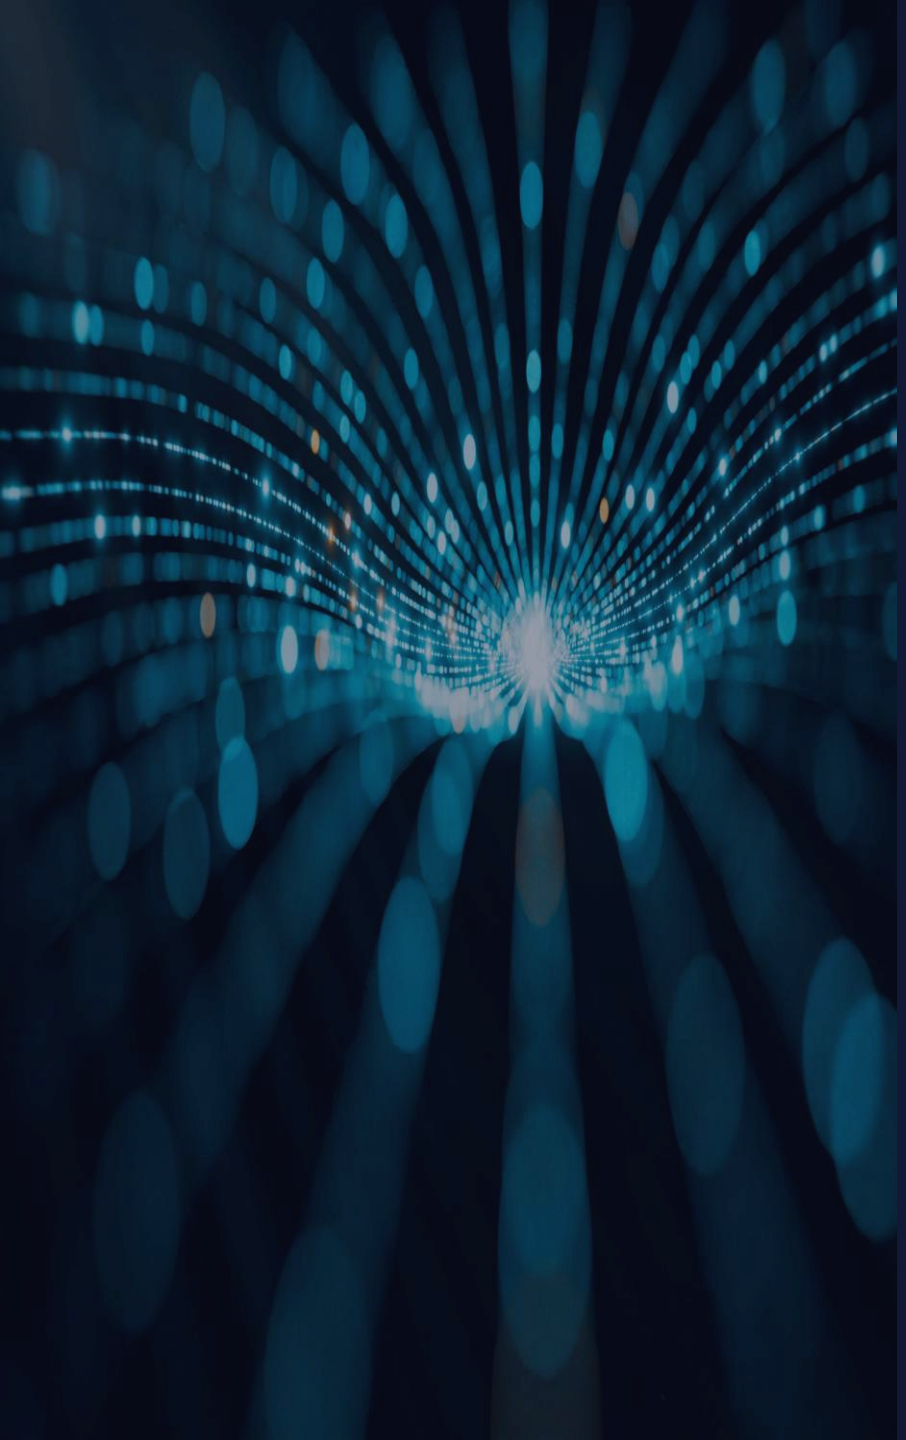

APPROACH

- Reframed agents around end-to-end outcomes—from intake and triage through execution, verification, and learning.
- Paired each capability with an owner, integrations, readiness evidence, and governance level.
- Separated read, recommend, and act authority; sequenced quick wins through foundations, scale, and bounded autonomy.
- Required approved deterministic automation with rollback, audit trail, and independent outcome verification.

EXPERIENCE OUTCOMES

- Created a portable blueprint spanning 143 candidate agents, 28 agent groups, and five operating teams. Made prerequisites visible across knowledge, service mapping, AIOps, orchestration, identity, and automation. The evidence-gated rollout supports rejection, supervision, or authority expansion by use case. Ericsson relevance: select one service outcome, redesign the full value stream, start with the minimum agent set in recommendation mode, and expand authority only after verified performance.

Enabling a Naas Transformation

Fast-Tracking Enterprise Connectivity

The Greenfield Naas Strategy

The Core Bottleneck vs The Greenfield Path

Traditional network **transformations stall** trying to map & migrate ~150 **disparate** legacy vendors simultaneously, there is a **need to decouple** consumption from messy infrastructure & **establish a modern digital** core to capture operational speed instantly

The Evolutionary Pivot

Naas 1.0 Baseline vs Naas 2.0 Greenfield Future

The basic version is characterized by virtualization, standard APIs, & programmatic provisioning links. It replaces ticketing but leaves underlying complexity isolated ,On the other hand the 2.0 version enables an autonomous cognitive ecosystem, harnesses Agentic AI, cloud-native meshes, & real-time intent orchestration to power heavy modern data workloads

TCO Reduction **35%** | **~ 99%** × Guaranteed availability of the network infrastructure

Our Point of View

While an autonomous ecosystem **drives enterprise** AI transformation , A legacy Network foundation **requires abstraction to build** the path

Given the ambition & scope to manage Ericsson's Corporate Global Network transformation a **Naas 2.0 Strategic Roadmap** needs to be laid out

The core challenge → A fragmented legacy complexity

1 Scale & Scope

300+ locations - R&D Centers, High uptime Factories, disparate offices

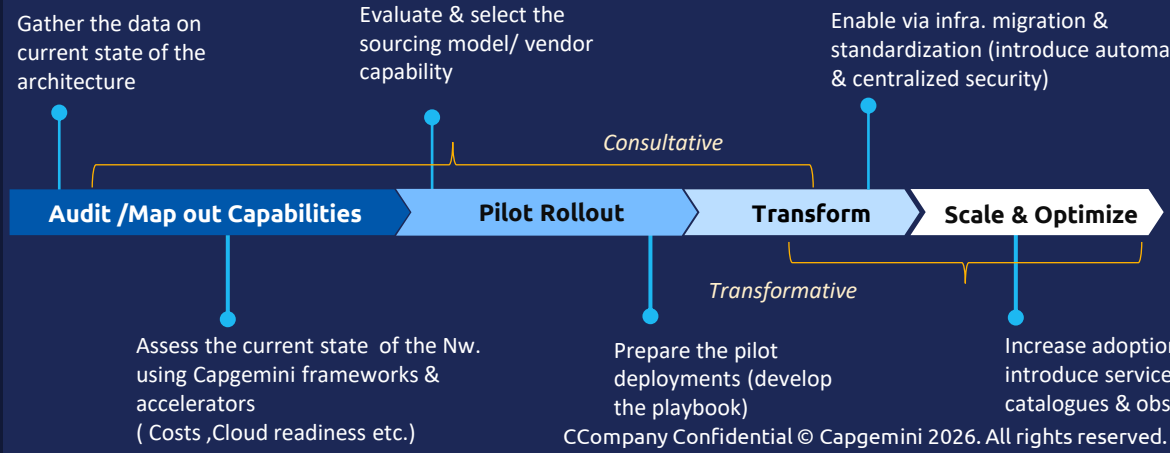

2 Infrastructure Fragmentation

Operating fragmented Network ecosystems, standalone wireless infra ,ECN backbone layers, & isolated security zones

3 Vendor Sprawl

Managing complex relational overhead with ~150 service providers & disparate core technology vendors-Palo Alto, cloud fare etc.

Our Approach to the Problem :

CCompany Confidential © Capgemini 2026. All rights reserved.

Envisioning the autonomous network transformation

NaaS value shifts from managing network components to managing end-to-end service intent, policy & outcomes

Vision: Self-configuring, self-healing, self-optimizing network services delivered on-demand based in Intent through secure APIs, with continuous Assurance

Reliable Inventory, visibility and baseline Operational KPI's

Automate 30-40% of repetitive operational tasks

Deliver standard Network services via self service workflows & API's

Automatically resolve selected low risk incidents

Manage priority services through intent and dynamic policies

Expand autonomous operations across domains and providers

1 Build the foundation

Maturity : Manual - Assisted

Key Activities

- Assess current state maturity
- Create Accurate inventory & topology
- Standardize configs & service models
- Centralized monitoring & telemetry
- Document processes & define governance

Priority Use cases

- Device discovery
- Alarm consolidation
- Hardware Reconciliation

2 Automate tasks and workflows

Maturity : Assisted- Task Automation

Key Activities

- Automate repetitive tasks
- Implement automation template
- Integrate with ITSM version control & rollback
- Define governance

Priority Use cases

- Zero touch onboarding
- VLAN/Port provisioning
- IP address allocation
- Change validation
- Incident enrichment
- Software upgrades

3 Network Service Orchestration

Maturity : Workflow Auto -Svc. orchestration

Key Activities

- Build self-service catalogue
- Define end to end service template
- Introduce SDN controllers & orchestration (MEF LSO)
- Expose service via API's integrate network, cloud & Security

Priority Services

- Branch connectivity
- SD- WAN
- Cloud connectivity
- BW. On demand
- Muti cloud Networking

4 Implement Closed Loop Ops

Maturity : Svc. orchestration-closed loop

Key Activities

- Streaming telemetry & observability
- Correlate arms to services
- Predictive analytics
- Automated remediation policies
- Validate service after every action

Priority Use cases

- Auto reroute on SLA breach
- Dynamic Bandwidth
- Config drift correction
- Proactive congestion mitigation

5 Enable Intent Based Operations

Maturity : Closed loop - Intent based

Key Activities

- Define business and applications intents
- Translate intent to policies and services
- Application aware network control
- Dynamic SLA mgmt.
- Capacity optimization
- Performance Mgmt.
- Extend across Fixed, mobile, edge & cloud

Outcomes

- Mgmt. by Intent not by device
- Applications request network by API's
- Dynamic resource mgmt.

6 Achieve Autonomous Operations

Maturity : Intent based -Autonomous

Key Activities

- Self-learning Ops. models
- Autonomous optimization & healing
- Federate across providers
- Autonomous security response
- Strong AI Governance
- Continuous learning from outcomes

Capabilities

- Self-configuring
- Self- healing
- Self- Optimizing
- Self Protecting
- Zero touch operations

Company Confidential © Capgemini 2026. All rights reserved.

Company Confidential © Capgemini 2026

WORKSHOP AGENDA

FROM THE SHIFT WE SEE → TO CHOICES ERICSSON CAN MAKE → TO WHAT WE CAN EXECUTE TOGETHER

1	VISION Why must Ericsson think differently ?	1.A	The World Is Changing →	Outside-in Perspective
		1.B	Ericsson Today →	Our Understanding
		1.C	Define The Future Enterprise →	Ericsson's vision of 2030
2	DESIGN THE ENTERPRISE What must Ericsson redesign?	2.A	Redesign the Enterprise →	Operating Model, decision rights, federation execution & partner accountability
		2.B	Build the Intelligence Layer →	Beyond individual AI Platforms
		2.C	Enable the Agentic Workforce →	Agentic Operations
3	ENABLE AT SCALE What will make autonomy trusted & scalable ?	3.A	Build Trust At Scale →	AI Governance, Control Towers, Responsible AI, & Sovereign AI
		3.B	Build the Intelligence Layer →	AI for Cyber Security, Autonomous Infra operations, AI Service Desk Strategy, NaaS

OUTCOME
What should Ericsson do next ?

USE CASES
Where to win

PRIORITIES
Where to focus

EXECUTION PATHWAY
How we get there

Company Confidential © Capgemini 2026. All rights reserved.

We have delivered measurable impact through transformative solutions for leading organizations worldwide

DATA MANAGEMENT

Network Equipment Provider

Defined an enterprise-wide data strategy to strengthen governance, improve data quality, maximize value realization, and enable analytics-led business growth.

DATA UNIFICATION

Retail

Established a unified Data & AI platform, breaking down data silos, accelerating AI initiatives, and expanding platform capabilities and services.

KM GOVERNANCE

Financial Services

Developed a KM Blueprint incorporating KM governance structures and operational principles and guidelines

SOVEREIGN AI

Telecommunications

Established a sovereign AI ecosystem with secure infrastructure, AI workloads, and data sovereignty.

SOVEREIGN CLOUD

Telecommunications

Designed and launched a sovereign cloud strategy, operating model, governance framework, and secure platform aligned with national compliance requirements.

AI ADOPTION

Telecommunications

Accelerated AI adoption through tailored assistants, AI literacy programs, roadmap alignment, and champion engagement.

AI GOVERNANCE

Logistics

Established enterprise-wide AI governance, risk management, compliance controls, and responsible AI operating model

A transformation roadmap can unify enterprise vision, AI strategy, governance, operations, network evolution, and employee experience into a structured path toward highly autonomous, AI-driven enterprise operations.

Company Confidential © Capgemini 2026. All rights reserved.

Five strategic priorities can enable Ericsson to progress from automation to governed autonomy

Together, they establish trusted operational context, reusable capabilities, scalable service journeys, controlled authority and clear accountability

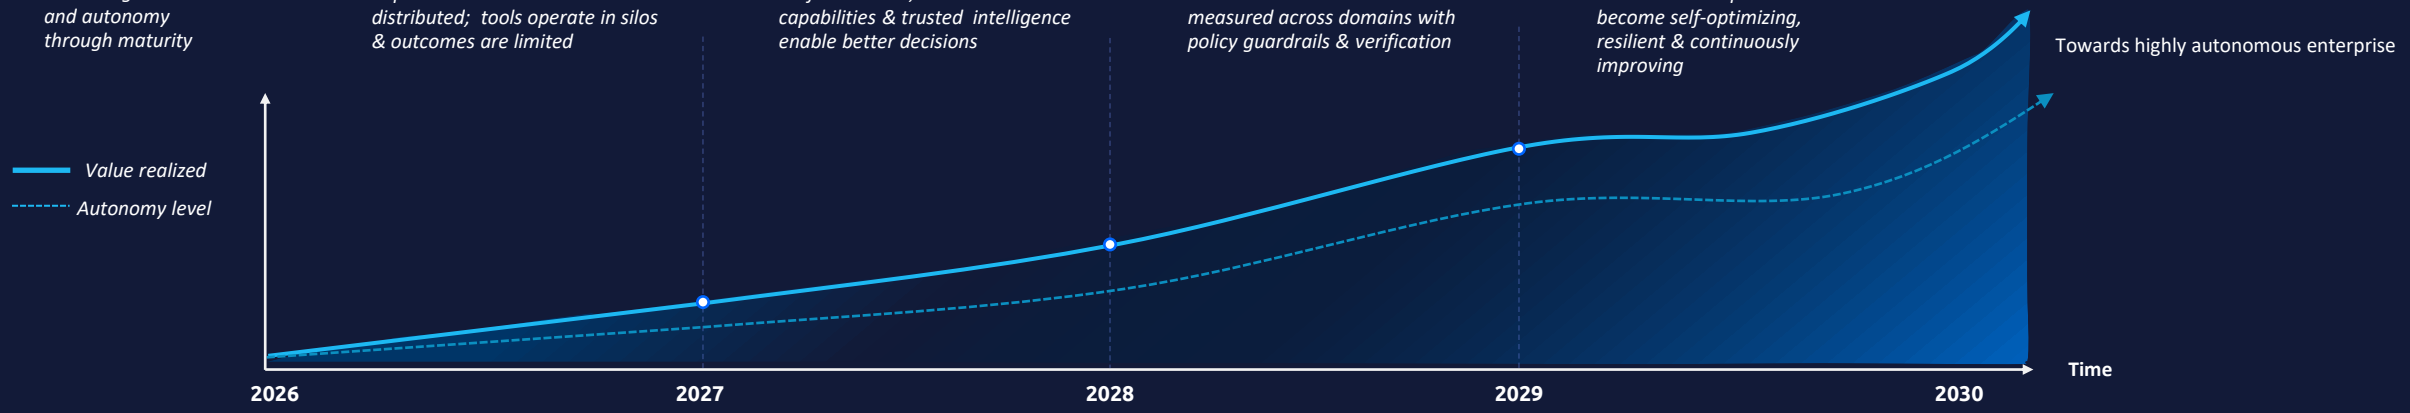

AUTONOMY MATURITY STATE
Increasing value and autonomy through maturity

FRAGMENTED AUTOMATION
Capabilities & data are distributed; tools operate in silos & outcomes are limited

CONNECTED INTELLIGENCE
Unified context, reusable capabilities & trusted intelligence enable better decisions

GOVERNED EXECUTION
Decisions & actions are measured across domains with policy guardrails & verification

AUTONOMOUS OPERATIONS
Cross-domain operations become self-optimizing, resilient & continuously improving

Five strategic priorities mature in parallel to unlock each stage of autonomy

1 Establish service truth & operational context

- Unified observability & telemetry
- Service topology, dependencies & CMDB
- Data quality, catalog & lineage
- Scaled runbooks and service context

Outcome: Reliable visibility of service state, dependencies and business impact

2 Simplify & Industrialize The Technology Stack

- Integrate monitoring, ITSM and automation platforms
- Standardise APIs, events and automation patterns
- Establish reusable AI, data and knowledge services
- Assess overlap and rationalization opportunities

Outcome: Interoperable, reusable capabilities for cross-platform execution

3 Prioritize & Scale High-value Use Cases

- Select observable, reversible and high-volume journeys
- Pilot → prove → scale approach
- Outcome & ROI tracking
- Industrialise reusable patterns and services

Outcome: Measurable value from AI services operating in governed production

4 Govern Autonomous Authority By Design

- Define policy, risk and execution boundaries
- AI/agent safety, ethics & compliance
- Sovereignty, privacy & data protection
- Human-in-the-loop for exceptions

Outcome: Observable, policy-bound and reversible autonomous execution

5 Redesign The Operating Ecosystem

- Clarify enterprise, domain and market decision rights
- Shift roles toward service ownership, exception handling and control
- Redesign partner accountability & ecosystem integration
- Value accountability & incentives

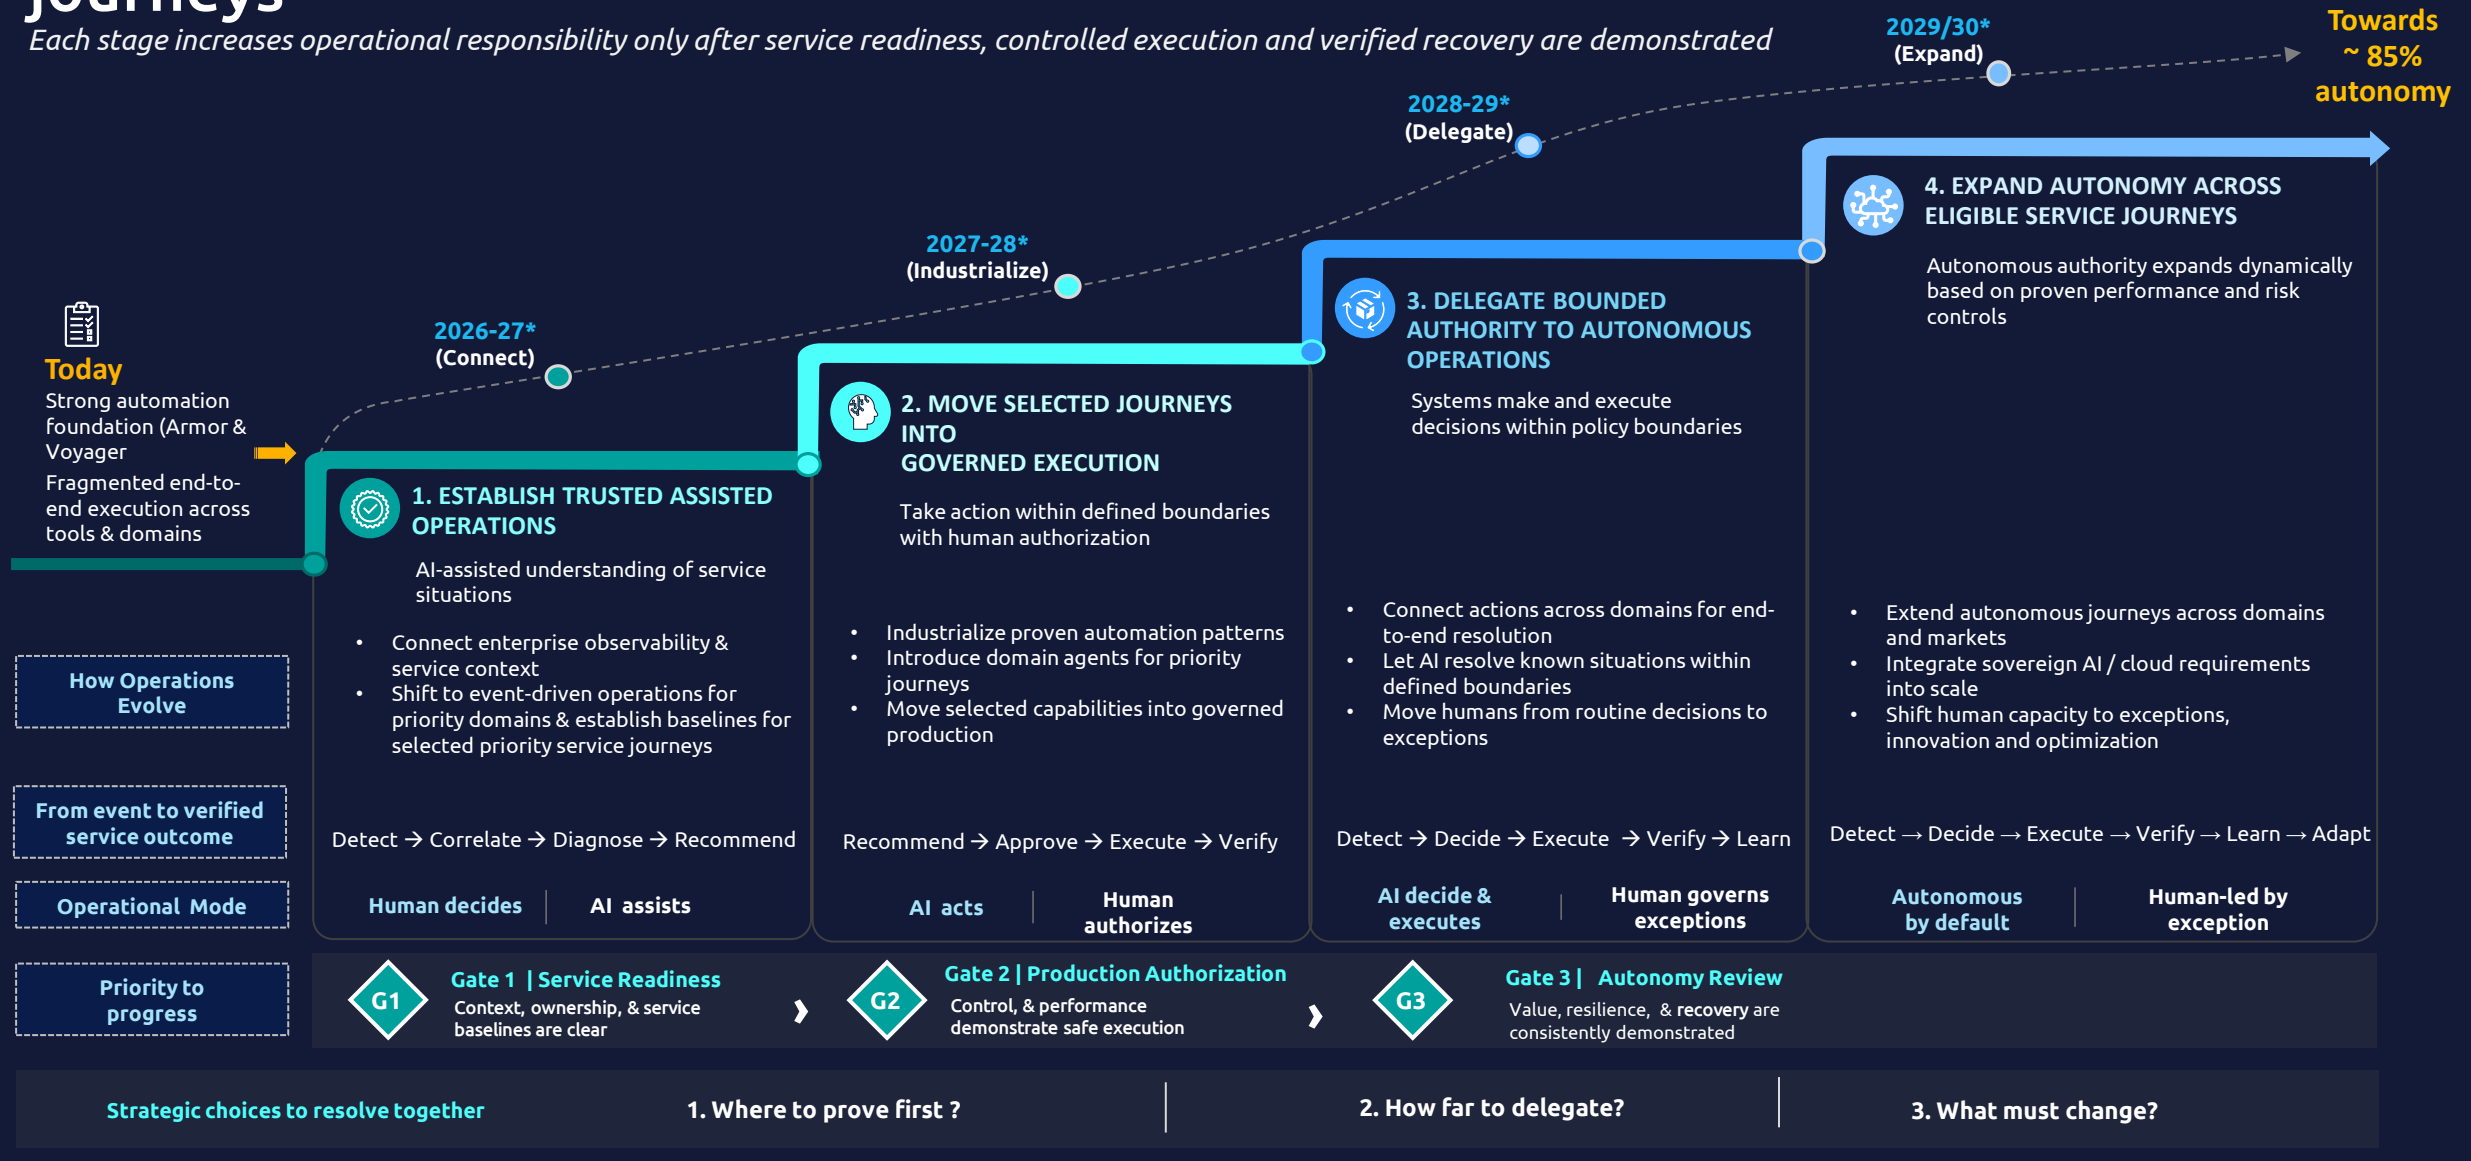

Outcome: Fit-for-purpose operating ecosystem that drive outcomes

Value can start early, but autonomous authority must be earned. Expand autonomy only where service truth, performance and control are demonstrated

Company Confidential © Capgemini 2026. All rights reserved.

As common foundations mature, Ericsson can progressively shift from assisted operations to conditional autonomy across eligible service journeys

Each stage increases operational responsibility only after service readiness, controlled execution and verified recovery are demonstrated

*Indicative timing → Subject to E/// baseline, dependencies, & investment decisions

Company Confidential © Capgemini 2026. All rights reserved.

Summary & Next Steps: Prioritized Actions and Expected Benefits journeys

Focus on high-value initiatives that accelerate autonomy, demonstrate measurable value, and build foundational capabilities for 2030 vision

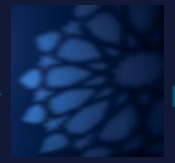

Current Transformation Challenges

Moving Beyond Traditional automation

AI Platform Fragmentation

Shadow AI & Agent Sprawl

Redesigning IT Operating model

Lack of AI Native KPIs

Legacy Complexity → **Knowledge Silos** → **Slow Transformation**

Immediate support from Capgemini

Enterprise AI Control Tower

Why: AI platform sprawl and Shadow AI are major concerns

Benefits:
- Immediate visibility of AI investments
- Reduced AI duplication
- Better cost control
- Foundation for future Agentic AI governance

AI Powered Incident Triage

Why: Ericsson already has operational telemetry & incident management process

Benefits:
- 25-30% reduction in investigation efforts
- Faster MTTR
- Improved engineer productivity

Autonomous Service Desk Pilot

Why: CIO vision is to reduce dependency on traditional service desks

Benefits:
- Immediate employee experience improvement
- Reduced ticket volumes
- 20-30% ticket deflection
- 70% employee satisfaction for AI support

Phased Transformation Timeline

1. Discover
Understand current state capabilities & opportunities
Weeks 0- 6

2. Decode
Analyze findings & identify priority interventions
Weeks 6 - 10

3. Decompose
Break strategic objectives into actionable initiatives
Weeks 10 - 20

4. Accelerate
Execute prioritized initiatives & scale proven value
Week 20 onwards

Capgemini

Thank you.

Make it real.

About Capgemini

Capgemini is the business transformation partner for enterprises in the age of AI. We help organizations imagine and build an intelligent, sustainable future, combining AI, technology and human ingenuity to transform how they operate, innovate and grow. With unique end-to-end capabilities spanning strategy, technology, engineering and intelligent operations, we bring together deep industry expertise and market-leading capabilities in AI, cloud and data to turn ambition into measurable business outcomes at scale. Supported by a robust ecosystem of partners and nearly 60 years of expertise, Capgemini is a responsible and diverse global organization of over 410,000 team members in more than 50 countries. The Group reported 2025 revenues of €22.5 billion.

Make it real.
